How AI models work: review

AI · Level 3 · Unit check

In this unit

- One neuron
- How a network learns
- Train, test, trust?
- Inside a language model

The big ideas

- A neuron multiplies, adds and decides; learning changes its weights
- Training takes small steps downhill on the error
- Trust scores from unseen examples, and ask which mistakes
- Language models predict likely text: ground them, then check

Team quiz

1. Warm-up (5 min): One word for each lesson.
2. Team quiz (15 min): Ten questions; each team agrees one answer.
3. Explain (8 min): Teams explain the two hardest answers.
4. Claim check (7 min): Three questions for one real AI claim.
5. Wrap-up (5 min): Exit ticket.

Print the quiz sheet (one per team) and read the other questions aloud from this check. Find one real AI claim to check.

Let’s discuss

1. Which idea will you use first?
2. Which question surprised you, and why?
3. Which AI claim in your school deserves the three questions?

Exit ticket

- One idea I will use, and when I will use it
