Lesson notes · for you

AI all around you

AI · Level 1 · Lesson 1

Time
25 min

Materials
A notebook or a sheet of paper for your AI diary; A pen; A phone you can use (yours or a family member's), if you have one

Learning goals

- Tell AI, which learns from examples, from machines that only follow rules.
- Spot AI in your own day: keyboards, voice notes, face unlock, maps, videos and spam filters.
- Explain that AI predicts: it doesn't think or feel like a person.

Activity: Learns or follows a rule? A sorting game

1. Warm-up (3 min): Each person names one app or machine they used today. Write them down: you will sort them too.
2. Sort (8 min): Lay out 12 cards and sort them into two piles, "learns from examples" and "follows a rule". Give a reason for every card. If you disagree, ask: did anyone write a rule for this, or did it learn from many examples?
3. Explain (6 min): For every card in the "learns" pile, say what it predicts: the next word, whose face it is, how slow the road is, whether a message is a scam. A card with no prediction probably belongs in the other pile.
4. Next word (5 min): One person starts a sentence, such as "After school I usually...". Each person in turn adds the most likely next word. Then play again, choosing surprising words. Talk about which sentence a chatbot would write, and why.
5. Wrap-up (3 min): Each person writes one thing AI can't do (for example, feel happy or know your plans) and one place they'll look for AI tomorrow.

Make 12 cards before you start: keyboard suggestions, voice notes to text, face unlock, map traffic warnings, video suggestions, spam filter, calculator, alarm clock, street light timer, microwave timer, school bell, TV remote. No cards? Say them aloud and point left or right.

Discussion

- Which AI did you use most today, and what did it predict?
- Can you think of a machine that looks clever but only follows a rule?
- Why does it matter that AI predicts instead of understanding?

Check yourself

- Name one machine that follows a rule and one that learns, and say what the learner predicts.

Try it this week
Keep an AI diary for one day. Every time you meet AI — your keyboard, a map, a video app, face unlock — write down what it predicted, and whether it was right.

Worksheet

AI all around you

AI · Level 1 · Lesson 1

Name _____ Class _____ Date _____

1 **A chatbot writes "I'm so happy to help you!" Does it really feel happy?**

◯ Yes — it said so ◯ Partly — it learned feelings from people's messages

◯ No — it predicts words that usually fit

2 **Which of these use AI? Choose all that do.**

☐ Your keyboard suggesting the next word ☐ An alarm that rings at the time you set

☐ Face unlock on a phone ☐ A calculator adding up your shopping

☐ A video app lining up the next clip

3 **When face unlock checks whether the face in front of it is yours, it is making a prediction, even though it isn't guessing about the future.**

◯ True ◯ False

4 **Match each tool to what it predicts.**

Keyboard suggestions	• • • •	Whether a message is a scam
Face unlock	• • • •	How slow the roads are today
Map app	• • • •	Whether this face is yours
Spam filter	• • • •	The word you'll type next

5 **Complete the sentence.**

Some machines follow _____ that people wrote. AI learns _____ from examples, and what it gives you is a _____ : a best guess.

Word bank: rules · patterns · prediction · feelings · promise

✎ **Where did you meet AI before school today? What was it predicting?**
