AI all around you

AI · Level 1 · Lesson 1

Today we will

- Tell AI, which learns from examples, from machines that only follow rules.
- Spot AI in your own day: keyboards, voice notes, face unlock, maps, videos and spam filters.
- Explain that AI predicts: it doesn’t think or feel like a person.

Remember

- Some machines only follow rules a person wrote, and they never learn.
- AI learns patterns from examples and makes predictions: best guesses, about the future or about now.
- AI predicts, but it doesn’t think or feel. Its guesses can be wrong, so you stay in charge.

Learns or follows a rule? A sorting game

1. Warm-up (3 min): Each person names one app or machine they used today.
2. Sort (8 min): Sort 12 cards into “learns from examples” and “follows a rule”.
3. Explain (6 min): For every AI card, say what it predicts.
4. Next word (5 min): Build a sentence aloud, one likely word each.
5. Wrap-up (3 min): Each person writes one thing AI can’t do.

Make 12 cards before you start: keyboard suggestions, voice notes to text, face unlock, map traffic warnings, video suggestions, spam filter, calculator, alarm clock, street light timer, microwave timer, school bell, TV remote. No cards? Say them aloud and point left or right.

Let’s discuss

1. Which AI did you use most today, and what did it predict?
2. Can you think of a machine that looks clever but only follows a rule?
3. Why does it matter that AI predicts instead of understanding?

Exit ticket

- Name one machine that follows a rule and one that learns, and say what the learner predicts.
