Lesson notes · for you

Who decides what's fair?

AI · Level 4 · Lesson 1

Time
27 min

Materials
A notebook and pen; Friends, classmates or family for the debate; A phone with the Darsi app (for the lab)

Learning goals

- Ask five questions of any AI: fair, private, open, responsible, agreed.
- Explain why the values inside an AI are people's choices.
- Describe the harm of deepfakes and of AI used to watch people, and what you can do.

Activity: The five-question debate

1. Warm-up (3 min): Each person lists three AIs that decide things about them or their family, such as face unlock, video suggestions, a spam filter or a map that picks a route.
2. Five questions (6 min): Choose one of them and ask the five questions: is it fair, private, open, who is responsible, and did people agree? Mark each answer as known or unknown.
3. Prepare (6 min): Split into two sides on "Should our school use face recognition for attendance?". Each side writes at least one point for each of the five questions.
4. Debate (8 min): Each side speaks for two minutes, then answers one question from the other side. Keep it respectful: argue about the camera, not about people.
5. Vote (4 min): Everyone votes. Then each person says one thing that would change their mind, such as a promise that photos are deleted every day.

For a group of friends, a class or your family. You need paper and a pen; no phone is needed.

Discussion

- Which of the five questions matters most to you, and why?
- Who should decide which mistake a school camera treats as worse?
- What would you do if a fake voice note of a teacher reached your class group?

Check yourself

- Name one AI you use, and one of the five questions it hasn't answered for you.

Try it this week
Hold a short debate at home or in class: should our school use face recognition for attendance? Both sides use the five questions; then vote, and each person says what would change their mind.

Worksheet

Who decides what's fair?

AI · Level 4 · Lesson 1

Name _____ Class _____ Date _____

1 **Your school's new camera recognises every student correctly, whatever their face or skin. Does that settle whether the school should use it?**

- ◯ Yes: if it's accurate for everyone, it's fine
- ◯ No: privacy, openness, responsibility and consent still need answers
- ◯ Yes: accuracy is the only thing that matters for a machine

2 **Match each worry about a school face camera to the question it raises.**

It makes more mistakes with darker skin	• • • •	Did people agree?
A company keeps the photos for years	• • • •	Who is responsible?
Nobody can say why a student was marked absent	• • • •	Is it open?
When it's wrong, there's nobody to complain to	• • • •	Is it private?
Parents were never asked	• • • •	Is it fair?

3 **An AI trained only on data has no human values in it, so its decisions are neutral.**

◯ True ◯ False

4 **Complete the sentence.**

AI ethics asks whether an AI is _____ to use, not only whether it _____. The _____ inside it are choices that people made.

Word bank: right · works · values · fast · secret

✎ **Think of an AI you or your family use: face unlock, a map, a video app or a voice assistant. Which of the five questions would you most like answered about it, and why?**
