Spot AI tricks and fakes: review

AI security · Lower secondary · Unit check

In this unit

- Deepfakes and AI-made content
- AI-powered scams
- Hidden orders
- Jailbreaks and guardrails

The big ideas

- Check the story, not the glitches; detectors are clues, not proof
- AI scams sound real: verify on a second channel, and never share codes
- To an AI it's all text: hidden orders ride in with what it reads
- Refusals can be talked round; checks in code on actions hold

Activity: Spot the trick

1. Warm-up (3 min): Recall one habit from each lesson.
2. Make (7 min): Write four made-up tricks: a fake, a scam, a hidden order, a jailbreak.
3. Swap (7 min): Another pair names each trick and the habit that beats it.
4. Share (3 min): Which trick was hardest to spot?

Use only made-up posts, messages and names. Never copy a real fake into your examples.

Let’s discuss

1. Which habit from this unit will you keep?
2. Which trick surprised you most?
3. How would you explain hidden orders to a younger student?
