Computational thinking, unplugged and with blocks: review

Programming · Level 1 · Unit check

In this unit

- Algorithms: exact instructions
- Loops
- Decisions and debugging
- Break it down

The big ideas

- A computer does exactly what the steps say, in order
- A loop says the steps once, and how many times
- Decisions use conditions; debugging is a routine, and bugs are normal
- Decompose, find patterns, abstract, and count the steps

Team quiz

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Act out the robot questions on a chalk grid

Let’s discuss

1. Which game will you play with your class first?
2. Which question surprised you, and why?
3. Which idea will your pupils find hardest?

Exit ticket
