Lesson plan · for the teacher

Python for teachers: unit check

Programming · Level 2 · Unit check

Time	Materials
45 min	Board, chalk, paper. No devices needed.

Learning goals

- First programs
- Decisions
- Loops
- Lists

Activity: Team quiz

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Write the hardest question on the board for tomorrow

Discussion

- Which program will you write first for your own work?
- Which question surprised you, and why?
- Which idea will your pupils find hardest?

Exit ticket

- One job I will hand to Python this month, and how

Try it in class tomorrow

Pick one job from your week (averages, a register count, grade bands) and write the program for it on your phone. Then show it to a colleague.

Worksheet · for pupils

Python for teachers: unit check

Programming · Level 2 · Unit check

Name _____ Class _____ Date _____

1 **What does this program print?**

```
x = "4"
y = 2
print(x * y)
```

◯ 8 ◯ 44 ◯ An error

2 **When a pupil types 15, input() gives back the number 15.**

◯ True ◯ False

3 **Put the lines in order: the program finds the top mark in the list without using max(). One line doesn't belong.**

Number the lines in order (1, 2, 3...). Cross out any line that doesn't belong.

☐ `if m < best:`

☐ `marks = [14, 9, 17, 11]`

☐ `if m > best:`

☐ `for m in marks:`

☐ `best = marks[0]`

☐ `print("Top mark:", best)`

☐ `best = m`

4 **Match each line to what it prints.**

print(7 * 6)	• • • •	2.5
print("7 * 6")	• • • •	3
print(len([4, 8, 1]))	• • • •	7 * 6
print(10 / 4)	• • • •	42

5 **Fill the gaps: the program saves 15 a week and counts the weeks until the total reaches 100.**

```
total = 0
weeks = 0
while total  __________  100:
    total = total + 15
    weeks = weeks  __________  1
print(weeks)
```
