Unplugged, then plugged

Programming · Level 4 · Lesson 1

Today we will

- Choose unplugged activities that teach real ideas.
- Link each one to code soon after.
- Judge what unplugged can and can’t do.

Remember

- Binary cards, sorting networks, halving, the human robot.
- Unplugged, then plugged, within the week.
- Name the idea pupils acted out.

Binary cards

1. Warm-up (5 min): How many numbers can five fingers show?
2. Play (15 min): Five pupils make numbers with binary cards.
3. Name it (5 min): This is binary: bits and place values.
4. Plug in (10 min): The same numbers in the lab and in Python.
5. Wrap-up (5 min): What could the cards not show? Exit ticket.

Make the cards from cardboard, large enough to see from the back row. One phone is enough for the plugged part.

Let’s discuss

1. What did pupils understand better because they acted it out?
2. What can unplugged not teach?
3. How soon after should the plugged lesson come?

Exit ticket

- Name one unplugged activity and the code you will link it to.
