Exact instructions

Programming · Level 1 · Lesson 1

In this lesson you will

- Say what an algorithm is.
- Give exact instructions.
- Program the robot with cards.

Key ideas

- An algorithm is exact steps, in order.
- A robot does exactly what you say.
- Forward, turn left, turn right.

Activity: The sandwich robot

1. Warm-up (3 min): Say “make a sandwich” to a robot. What happens?
2. Write (7 min): Write the sandwich steps in order.
3. Test (7 min): A partner follows your steps exactly.
4. Fix (3 min): Add the missing step and try again.

Act it out with pretend bread: no food is needed.

Let’s discuss

1. What happened when a step was missing?
2. Why can’t a robot guess?
3. Where else do you follow steps in order?

Exit ticket

- Write three exact steps for one thing you do every day.
