Defenders: review

Cyber security · Level 4 · Unit check

In this unit

- Fingerprints of data: hashing
- Locks and keys: public-key cryptography
- Networks and the defenders who watch them
- Careers in cyber security

The big ideas

- A hash is a one-way fingerprint
- Public key locks and checks; private key opens and signs
- Confidentiality, integrity, availability, in layers
- Permission first, always

Review: Defenders' quiz

1. Recall (3 min): One idea per lesson
2. Quiz (5 min): Explain it to a partner
3. Fix (2 min): One habit to change

Work in pairs. Keep this short: the unit check comes next.

Think it through

1. Why can’t a good website send you your password?
2. What does the padlock prove, and what doesn’t it?
3. What would you do if you found a weakness by accident?

Before you go

- The idea that surprised me most, and one step I will take.
