Lesson notes · for you

Spreadsheets and clean data: unit check

Data engineering · Level 2 · Unit check

Time	Materials
25 min	Paper and a pen. No device needed.

Learning goals

- Cells, rows and formulas
- Messy names, wrong counts
- Blanks, repeats and impossible values
- Summaries that tell the truth

Activity: Team quiz

1. Teams (2 min): Make teams of four and give each team a sheet of paper for its answers.
2. Quiz (15 min): Read each question aloud; each team agrees on one answer and writes it down.
3. Explain (8 min): Reveal each answer and ask one team to explain why it's right.

Discussion

- Which cleaning step do you think matters most?
- Where could you use a median instead of a mean?
- What would you check before trusting a table?

Check yourself

- One thing I'll check before I trust a number, and why.

Try it this week

Take one table you made in this unit: check it for blanks, repeats and impossible values, then sum it up with the right summary and an honest chart.

Worksheet

Spreadsheets and clean data: unit check

Data engineering · Level 2 · Unit check

Name _____ Class _____ Date _____

1 **What does =AVERAGE(C2:C9) work out?**

◯ The mean of every cell from C2 to C9 ◯ The mean of C2 and C9 only ◯ The total of row 2

2 **Fill the gaps: print the total and how many marks there are.**

```
marks = [12, 15, 9]
print( _____ (marks), _____ (marks))
```

Word bank: `sum` `max` `sorted` `len`

3 **Which of these would a computer count as different from "football"? Choose all that apply.**

☐ "Football" ☐ "football " (space at the end) ☐ "football"

4 **Put the cleaning steps in order.**

☐ Count again

☐ Match to the allowed list

☐ Make the letters match

☐ Remove the spaces at the ends

5 **A blank mark should be counted as zero in the average.**

◯ True ◯ False
