Reading data safely

Data science · Level 1 · Lesson 4

In this lesson you will

- Look inside groups before comparing averages.
- Ask what else could explain a pattern.
- Share results without exposing a child.

Key ideas

- Together is not cause.
- Small groups jump around.
- Share the class, never the child.

Claim checkers

1. Warm-up (5 min): Believe it?
2. Check (10 min): Three questions.
3. Protect (10 min): Safe sharing.
4. Wrap-up (5 min): What did you find out?

Let’s discuss

1. Which claim was weakest?
2. Why are small groups risky?
3. What should never go on a class chart?

Exit ticket

- Write one pattern from school life and one other thing that could explain it.
