Distributions and histograms

Data science · Level 2 · Lesson 1

In this lesson you will

- Build a histogram with equal bins.
- Read symmetric and skewed shapes.
- Choose a middle that fits the shape.

Key ideas

- Bars count values in equal bins.
- Skewed right: the mean sits above the median.
- The bin width can hide the shape.

A sticky-note histogram

1. Warm-up (5 min): What shape?
2. Measure (10 min): Hand spans.
3. Read (10 min): Name the shape.
4. Wrap-up (5 min): What did you find out?

Let’s discuss

1. Why must bins be equal?
2. What did wider bins hide?
3. Which middle fits a skewed shape?

Exit ticket

- Sketch a skewed-right histogram and mark roughly where the mean and the median are.
