Fitting a line

Data science · Level 3 · Lesson 1

In this lesson you will

- Fit a line to a scatter plot.
- Read the slope and the start.
- Know where a line stops working.

Key ideas

- A line is a model.
- Slope: change per unit.
- Predict only inside the data.

A ruler line

1. Warm-up (5 min): Guess the arm span
2. Plot (10 min): Height and arm span.
3. Predict (10 min): Someone new.
4. Wrap-up (5 min): What did you find out?

Let’s discuss

1. What does the slope tell you?
2. Where would the line stop working?
3. How close was your prediction?

Exit ticket

- mark = 5 + 3 × hours. Predict the mark for 2 hours.
