Lesson notes · for you

Fair or unfair models

Data science · Level 4 · Lesson 3

Time
30 min

Materials
A notebook and a pencil; A phone or tablet with Darsi, for the lab

Learning goals

- Find bias with error rates by group.
- Explain where bias starts.
- Plan checks before adopting a model.

Activity: Fair for everyone?

1. Warm-up (5 min): Say whether an app that is right 90% of the time must be fair to everyone.
2. Count (10 min): With a partner, work out each group's error rate from a results table.
3. Fix (10 min): List what could cause the gap and two ways to make the model fairer.
4. Wrap-up (5 min): Say your finding in one sentence with a number in it, then fill in the exit ticket.

Discussion

- Which group had more errors?
- Where does bias come from?
- Who should check a model's results?

Check yourself

- Group A: 3 wrong in 20. Group B: 9 wrong in 20. Write both error rates.

Try it this week
Try a voice assistant or a photo app with different voices or faces in your family. Does it work equally well for everyone?

Worksheet

Fair or unfair models

Data science · Level 4 · Lesson 3

Name _____ Class _____ Date _____

1 **Where does most bias in a model start?**

◯ In the data it learned from ◯ In the screen colour ◯ In the pupils

2 **Deleting the gender column guarantees a model cannot discriminate by gender.**

◯ True ◯ False

3 **Finish fnr(r, p) so it returns the false negative rate as a whole percentage, then print it for both groups.**

```
def fnr(r, p):
    return 0

print(fnr([1, 1, 1, 1], [1, 1, 1, 0]), fnr([1, 1, 1, 1], [1, 0, 0, 0]))
```

Write your program:

4 **Match each source of bias to an example.**

Under-representation	• • • •	Postcode standing in for income
Biased labels	• • • •	Past hiring decisions used as “good candidate”
Proxy	• • • •	Few rural voices in training data

5 **Base rates differ between two groups. What is generally true?**

◯ You cannot equalise error rates and calibration at once ◯ Any model is automatically fair

◯ Accuracy settles the question

✎ **Has an app ever not understood you, or someone you know? Who do you think it learned from?**
