Your connected project

IoT · Level 4 · Lesson 4

Today you will

- Turn a problem in your community into a connected design: sense, decide, act, connect.
- Weigh designs fairly against cost, power, safety and privacy.
- Present the design so others can judge and improve it.

Design it fairly

- Start from a real problem and its people
- Sense, decide, act, connect
- Score cost, power, safety and privacy
- Fail safe, then ask what you missed

Design a connected solution

1. Pick a problem and talk to two people.
2. Write a success measure.
3. Draw two designs as four boxes.
4. Score both, and plan for failure.
5. Show someone and note what you missed.

Never test anything in floodwater, near mains electricity or on a road. Ask an adult before you talk to people you don't know, and don't photograph people without asking.

Let’s discuss

1. Which design scored best, and would the people affected agree?
2. What does your design do when its sensor fails?
3. What data does your design collect, and does it need all of it?

Check yourself

- Name the four parts of a connected design.
