The best for whom?

Optimization · Level 1 · Lesson 4

Today we will

- Judge a plan by its total, its worst-off and its gap.
- Compare first come, first served with other sharing rules.
- Agree a fair rule for class duties together.

Remember

- First come, first served is quick, but an early choice can take someone’s only good option.
- The best total (39 against 29) can still ask someone to give something up.
- Agree the rule before anyone sees the result, and show the numbers.

Fair class duties

1. Warm-up (5 min): Which class job does nobody want?
2. Score (7 min): Each pupil scores five duties from 1 to 5.
3. Two plans (13 min): First come, and lift the lowest.
4. Compare (8 min): Totals and lowest scores on the board.
5. Agree (7 min): Choose a rule and a rota for the hardest job.

Keep the scores private within each group so nobody is teased for disliking a job. The point is the rule, not who said what.

Let’s discuss

1. Who came off worst under first come, first served?
2. Is a rule fair just because everyone knows it?
3. How should we share the job nobody wants?

Exit ticket

- Write one sharing rule at our school, who it is hard on, and one way to make it fairer.
