Lesson plan · for the teacher

Is it AI?

AI · Level 1

Unit 1 · Lesson 1

Time	Ages	Materials
45 minutes	10–15 (adaptable)	Board, chalk, 12 paper cards. No devices or electricity needed.

Learning goal

Pupils can explain that AI learns patterns from examples, and can tell AI tools apart from ordinary machines.

Steps

1. **Warm-up: calculator or assistant?** — 5 min
   Ask: “What can a calculator do? What can a phone assistant do?” List answers in two columns on the board.

2. **Human or machine?** — 10 min
   Read 6 short sentences aloud. Pupils stand up if they think a machine wrote it. Discuss: how could a machine learn to write like that?

3. **Unplugged game: teach the machine** — 20 min
   One pupil is “the model”. Show 8 cards labelled “fruit” or “not fruit”. Then show 4 new unlabelled cards — the model must guess. Discuss wrong guesses: were the examples enough?

4. **Exit ticket** — 10 min
   Pupils complete question 4 of the worksheet and hand it in.

Key words

artificial intelligence (AI) · data · example · pattern · prediction · model

Try this tomorrow

Keep the cards. In the next lesson, give the “model” only examples of red fruit and ask it about a green apple. This shows how biased examples cause wrong answers.

Worksheet · for pupils

Is it AI?

AI · Level 1

Unit 1 · Lesson 1

Name _____ Class _____ Date _____

1 **Circle the things that use AI.**

Calculator	Voice assistant on a phone	Light switch
Translation app	Bicycle	Spam filter in email

2 **Match each word to its meaning.**

Data	Information a computer can use
Pattern	Something that repeats in a predictable way
Prediction	A guess based on what was learned

3 **Put the steps in order (write 1–4 in the boxes).**

- ☐ The model makes a guess about something new
- ☐ We collect many examples
- ☐ We check if the guess is right
- ☐ The model looks for patterns in the examples

4 **Your turn**

One way AI could help in our school:

_____

_____

One thing we should be careful about:

_____

_____
