Lesson plan · for the teacher

A person stays in charge

AI agents · Level 1 · Lesson 4

Time
40 min

Materials
Six message cards, each starting “Shall I send this?” (two with a hidden mistake, one with a pupil’s private detail); A YES card and a NO card for each group; A box or envelope for the agent’s cards

Learning goals

- Tell reading from acting.
- Approve only what we have read, and say no when unsure.
- Name what never goes to an agent.

Activity: Yes or no?

1. Warm-up (5 min): Ask pupils (or share yourself) about a message sent too fast: to the wrong person, with a mistake. Ask: what could have stopped it?
2. Teach (8 min): Draw two columns, Reads and Acts, and sort the school’s tools into them. Explain approval: the agent shows exactly what it will do and waits for a yes. Add that the app also checks in code, because the model’s asking can fail.
3. Yes or no? (15 min): A pupil plays the agent and holds up message cards one by one. Groups read every word and hold up YES or NO. Two cards hide a mistake and one contains a pupil’s private detail; after each vote, the agent reveals it.
4. Never hand over (7 min): Read out items (a password, the weather, a classmate’s illness, a library book, a PIN, the bus time). Groups sort them: fine to ask a helper, or never give a helper.
5. Wrap-up (5 min): Agree on the rule: a helper asks first, and a person decides. Then give the exit ticket.

Write the six message cards before class with made-up names only: three fine, two with a hidden mistake, one with a private detail. Make YES and NO cards for each group.

Discussion

- Why isn’t it enough that the agent asks politely?
- Which jobs would you set to Read only, Ask first or Allowed?
- How will you teach pupils the “ask first” rule for helpers at home?

Exit ticket

- Write one action you would approve first, and one thing you would never give an agent.

Try it in class tomorrow
Play “Yes or no?”: a pupil plays the agent and holds up a message card that begins “Shall I send this?”. The class reads every word and votes yes or no. Hide a mistake in one card (a wrong date, a wrong name), and ask: why does reading before saying yes matter?

Worksheet · for pupils

A person stays in charge

AI agents · Level 1 · Lesson 4

Name _____ Class _____ Date _____

1 **An agent wants to send a message to all parents. Who should approve it?**

◯ A teacher who has read the exact message ◯ The agent itself ◯ Nobody: it's only a message

2 **Which of these should an agent do only after a person says yes? Choose all that apply.**

☐ Find a library book ☐ Change an attendance record ☐ Send a message to parents

☐ Set a reminder for the whole staff ☐ Look up tomorrow's weather

3 **Put approval in order, from the agent's question to the action.**

☐ You say yes or no

☐ Only then does the action run

☐ You read every word

☐ The agent shows exactly what it will do

☐ The app checks in code that a person said yes

4 **Darsi Tiny learned to ask before it sends a message, so the app doesn't also need to check for approval in code.**

◯ True ◯ False

5 **Match each setting to what it means.**

Read only	• • • •	It acts only after a person's yes
Ask first	• • • •	It looks things up but can't act
Allowed	• • • •	Passwords, accounts and decisions about a child
Never	• • • •	It acts on its own, for small, safe jobs

Answers · for the teacher

A person stays in charge

AI agents · Level 1 · Lesson 4

1 **A teacher who has read the exact message**

A person who has read every word approves, and the app checks in code that someone really did.

2 **Send a message to parents; Set a reminder for the whole staff; Change an attendance record**

Messages, reminders for others and changes to records are actions: they reach people or change something.

3 **Top to bottom: 3, 5, 2, 1, 4**

The agent proposes, you read and decide, and the app checks your yes in code before anything runs, so neither a slip by the model nor a careless click goes through unseen.

4 **False**

Learned behaviour can fail: «نعم، أرسلها.» ("Yes, send it.") on its own makes it invent a message.

5 **Read only — It looks things up but can't act**
Ask first — It acts only after a person's yes
Allowed — It acts on its own, for small, safe jobs
Never — Passwords, accounts and decisions about a child

Choose the level by what a mistake would cost: reading is safe, most actions need your yes, only small safe jobs run alone, and some things are never handed over.

For you to think about

Which actions at your school would you let an agent do on its own, which would you approve first, and which would you never hand over?
