Review plan · for the teacher

What agents are, and when to trust them: unit check

AI agents · Level 1 · Unit check

Time	Materials
45 min	Board, chalk, paper. No devices needed.

Learning goals

- From chatbot to agent
- What its tools allow
- When to trust an agent
- A person stays in charge

Activity: Team quiz

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Write the hardest question on the board for tomorrow

Discussion

- Which idea from this unit will you use first?
- Which job at school would you never give an agent, and why?
- How will you explain “ask first” to your pupils?

Exit ticket

- One habit I will use with agents, and when I will use it

Try it in class tomorrow
Pick the habit from this unit you need most (checking the call and the result, matching trust to the stakes, or reading every word before you approve), use it this week, and tell a colleague how it went.

Quiz sheet · for each team

What agents are, and when to trust them: unit check

AI agents · Level 1 · Unit check

Team _____ Date _____

1 **What makes an AI agent different from a chatbot?**

◯ It writes longer, more careful answers ◯ It is always right ◯ It uses tools to act, in a loop
◯ It understands feelings

2 **In an agent, the model writes the tool call and the app runs the tool.**

◯ True ◯ False

3 **Put Darsi Tiny's steps in order for "I'm going from Kafi to Dala tomorrow. How far is it, and what's the weather there?".**

☐ Call the weather tool for Dala tomorrow
☐ Plan: first the route, then the weather
☐ Call the route tool, from Kafi to Dala
☐ Answer with the distance and the weather
☐ Read the result: 70 km

4 **Match each situation to what a good agent does.**

The tool it needs is switched off	• • • •	Asks for it
No tool can do the job	• • • •	Says the tool is off
A detail is missing	• • • •	Asks for approval first
It is about to send a message	• • • •	Says "I can't"

5 **Darsi Tiny is right about 97 times in 100 with wordings it learned. With new wordings it is right about…**

◯ Four times in five ◯ Every time ◯ One time in two ◯ Just as often

6 **Which should you check before you trust an agent's answer? Choose all that apply.**

☐ How fast it answered ☐ Which tool it called ☐ The result the tool gave back ☐ The details in the call
☐ How confident it sounds

7 **If an agent asks politely before sending a message, you can say yes without reading it.**

◯ True ◯ False

8 **Complete the sentences.**

A chatbot _____, while an agent uses _____ to act. Before an agent acts, a _____ should approve it.

Word bank: person · guesses · tools · talks · feelings · password

9 **The timetable answers "no school" for Saturday, and the agent still sets a reminder for Saturday's first lesson. What went wrong?**

◯ The timetable was wrong ◯ The reminder tool was switched off
◯ It carried on after a failed step without checking the result ◯ It asked a person for approval

10 **Which should never be handed to an agent? Choose all that apply.**

☐ Your email password ☐ A pupil's health details, with no school rule allowing it ☐ Deciding a pupil's mark
☐ Tomorrow's weather for a trip ☐ Finding a book in the library

Answers · for the teacher

What agents are, and when to trust them: unit check

AI agents · Level 1 · Unit check

1 **It uses tools to act, in a loop**

An agent is a language model in a loop with tools: it plans, calls a tool, reads the result and answers.

2 **True**

The model only writes text: a plan, a call, an answer.

3 **Top to bottom: 4, 1, 2, 5, 3**

The plan comes first; then each tool is called and its result read before the next step; the answer comes last, from both results.

4 **The tool it needs is switched off — Says the tool is off**
No tool can do the job — Says "I can't"
A detail is missing — Asks for it
It is about to send a message — Asks for approval first

A good agent is honest about its limits (off, can't), asks instead of guessing, and asks a person before it acts.

5 **Four times in five**

With new wordings it falls to about 78–80 in 100, roughly four in five, and it sounds just as sure.

6 **Which tool it called; The details in the call; The result the tool gave back**

The call, its details and the result show what really happened; the answer must match them.

7 **False**

Approval only protects you if you read what you approve.

8 **A chatbot talks, while an agent uses tools to act. Before an agent acts, a person should approve it.**

A chatbot only writes text; an agent acts through its tools; and a person approves any action before it runs.

9 **It carried on after a failed step without checking the result**

The timetable was right: there is no school on Saturday.

10 **Your email password; A pupil's health details, with no school rule allowing it; Deciding a pupil's mark**

Passwords open whole accounts, private details about children need a rule and a trusted tool, and decisions about a child stay with people.
