Lesson plan · for the teacher

A task in steps

AI agents · Level 2 · Lesson 1

Time
40 min

Materials
Index cards or paper slips, one per step; Pens; Three real school events to choose from (a trip, a sports day, a parents' meeting); The tool names on the board: route, weather, timetable, reminder, message

Learning goals

- Break a school job into steps, each with a tool.
- Show how one step's result feeds the next.
- Put a check after each step, and before any action.

Activity: Plan the trip

1. Warm-up (5 min): Ask the class what has to happen before a trip: find the road, check the weather, tell the families. Write their ideas on the board in the order they give them.
2. Teach (8 min): Explain that an agent writes a plan and calls one tool after another, and that one step's result can feed the next (the timetable says PE, so the reminder says "6B: PE"). Tell the Saturday story: "no school", and a reminder set anyway.
3. Plan the trip (15 min): Groups choose an event and write one card per step: the tool, what it needs, what it gives back. They lay the cards in order, draw arrows where a step uses a result, circle where a person checks, and write on the back what happens if that step fails.
4. Check it (7 min): Groups swap plans. Each looks for a missing check: a step that acts with nobody looking, or a failed step that would lead to an action anyway.
5. Wrap-up (5 min): Ask: which step would hurt most if it failed? Agree that every action waits for a person's yes. Then give the exit ticket.

Prepare index cards, pens and three real events to choose from. Write the tool names on the board: route, weather, timetable, reminder, message. No phones are needed.

Discussion

- Which step in your plan would hurt most if it failed?
- Why does Darsi Tiny still set the Saturday reminder?
- Which school jobs should never run without a person checking?

Exit ticket

- Write a two-step school job, the tool for each step, and where you would check.

Try it at school tomorrow
Plan a class trip with your pupils as tool steps: one card per step (the tool, what it needs, what it gives back). Then mark where a person checks, and what happens if a step fails.

Practice questions · for you

A task in steps

AI agents · Level 2 · Lesson 1

1 **In the reminder "6B: PE", where did "PE" come from?**

◯ Darsi Tiny made it up ◯ From the timetable's result ◯ From the teacher's request

2 **Put the steps in order for this job: "Find who was absent in 6B this week, then draft a note to each family."**

☐ Draft a note for each family from the result

☐ Check the result: who was absent?

☐ The plan: attendance first, then a draft note

☐ A person reads each note and says yes before it is sent

☐ Call the attendance tool for 6B, for this week

3 **Darsi Tiny wrote these two calls for "6B's first lesson on Saturday, and remind me at 7:30". What went wrong?**

```
timetable{"class":"6B","day":"saturday",
          "period":1}
# result: {"error":"no school"}
reminder{"text":"6B: 6B",
         "when":"saturday 07:30"}
```

◯ The timetable tool was switched off ◯ Step one failed, but step two ran anyway

◯ The reminder's time is in the wrong shape

4 **If the first step of a plan fails, Darsi Tiny stops and tells you.**

◯ True ◯ False

5 **Match each goal to the tools Darsi Tiny calls, in order.**

"I'm going from Kafi to Dala tomorrow: how far, and what's the weather?"	• • • •	Timetable, then reminder
"What does encryption mean, and do we have books about it?"	• • • •	Weather only
"6B's first lesson tomorrow, and remind me at 7:30"	• • • •	Route, then weather
"What's the weather in Dala tomorrow?"	• • • •	Glossary, then library

✎ **Think of a job you do every week that takes two or more steps. If an agent did it, where would you put the checks?**

Check your answers

A task in steps

AI agents · Level 2 · Lesson 1

1 **From the timetable's result**

The request only said 6B. PE came back from the timetable tool, and the second call used it.

2 **Top to bottom: 4, 3, 1, 5, 2**

The plan comes first, then the step that finds the names, then a check on that result before anything is drafted from it.

3 **Step one failed, but step two ran anyway**

The timetable returned an error, "no school", and Darsi Tiny still wrote the reminder, with "6B" where the subject should be.

4 **False**

It carries on: on Saturday it still sets the reminder "6B: 6B" after the timetable answers "no school".

5 **"I'm going from Kafi to Dala tomorrow: how far, and what's the weather?" — Route, then weather**
"What does encryption mean, and do we have books about it?" — Glossary, then library
"6B's first lesson tomorrow, and remind me at 7:30" — Timetable, then reminder
"What's the weather in Dala tomorrow?" — Weather only

A two-step goal needs one tool to find something and another to use it: the route before the weather there, the meaning before the books, the lesson before the reminder.
