Review plan · for the teacher

# Agents for teachers' work, checked and approved: unit check

AI agents · Level 2 · Unit check

| Time | Materials |
| --- | --- |
| 45 min | Board, chalk, paper. No devices needed. |

## Learning goals

- A task in steps
- Ask clearly
- Check its work
- Pupils' data, cost and the right agent

## Activity: Team quiz

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Write the hardest question on the board for tomorrow

## Discussion

- Which habit will you use first?
- Which question surprised you, and why?
- Which school job would you never hand to an agent?

## Exit ticket

- One habit I will use, and with which job

**Try it at school tomorrow**
Pick the habit from this unit you need most (planning the checks, a clear request, the five rules, or sharing the task, not the child), use it this week, and tell a colleague how it went.

Quiz sheet · for each team

# Agents for teachers' work, checked and approved: unit check

AI agents · Level 2 · Unit check

Team _____ Date _____

**1** **Darsi Tiny plans: "First the timetable, then a reminder." Why that order?**

◯ Reminders always come last ◯ The timetable tool is faster ◯ The reminder needs the timetable's result

**2** **If the first step of a plan fails, a small agent may still carry out the next step.**

◯ True ◯ False

**3** **Which of these belong in a clear request to an agent? Choose all that apply.**

☐ Please and thank you ☐ What done looks like ☐ The goal ☐ Limits, such as "show me first"
☐ Who, what, when and where

**4** **Put in order what should happen to an action an agent proposes.**

☐ The checker applies its rules
☐ The model writes the call
☐ The app runs the tool
☐ The log records it
☐ A person says yes

**5** **You asked: "Remind me tomorrow at 8:00 to collect the homework." What is wrong with this call?**

```
reminder{"text":"collect the homework",
         "when":"tomorrow 25:00"}
```

◯ It is the wrong tool ◯ The time isn't from your words and isn't a real time ◯ Nothing: it can run

**6** **Match each problem to what deals with it.**

| | | |
|---|---|---|
| A detail is missing from the request | • • • • | A check before the next step |
| A name was copied wrongly | • • • • | A person says yes |
| A step failed | • • • • | The agent asks, or you add it |
| A message is ready to send | • • • • | A checker rule stops the call |

**7** **Complete the rule for pupils' data.**

Share the _____, not the _____.

**Word bank:** child · phone · task · data

**8** **Writing "don't send it" in a request is enough to make sure nothing is sent.**

◯ True ◯ False

**9** **Which of these are true of Darsi Tiny on the phone, compared with a big cloud model? Choose all that apply.**

☐ It works with no signal ☐ Each request uses no data ☐ Every request costs money
☐ It knows far more about the world ☐ It knows only its ten tools

**10** **Which job is the safest to give a cloud agent?**

◯ Summarise these pupils' medical notes ◯ Rank my pupils by their marks
◯ Draft a general letter about sports day, with no names

Answers · for the teacher

# Agents for teachers' work, checked and approved: unit check

AI agents · Level 2 · Unit check

1. **The reminder needs the timetable's result**

   The reminder's text uses what the timetable returns (PE), so the timetable must come first.

2. **True**

   Darsi Tiny sets the reminder "6B: 6B" after the timetable answers "no school".

3. **The goal; Who, what, when and where; Limits, such as "show me first"; What done looks like**

   The goal, the details, the limits and what done looks like are the four parts.

4. **Top to bottom: 2, 1, 4, 5, 3**

   Checks come after the call is written and before anything runs, the person's yes comes before the action, and the log keeps the record.

5. **The time isn't from your words and isn't a real time**

   You said 8:00, and 25:00 doesn't exist: the rules "every number from your words" and "the right shape" both stop it before it runs.

6. **A detail is missing from the request — The agent asks, or you add it**
   **A name was copied wrongly — A checker rule stops the call**
   **A step failed — A check before the next step**
   **A message is ready to send — A person says yes**

   Each kind of slip has its own defence: a clear request, a rule in code, a check between steps, and a person's yes before any action.

7. **Share the task, not the child.**

   Ask an agent for help with the job, such as a template or sample comments, and add the pupils' names and details yourself, offline.

8. **False**

   A limit in words is a request, not a lock: the model can misread it.

9. **It works with no signal; Each request uses no data; It knows only its ten tools**

   After one 2.8 MB download, Darsi Tiny answers on the phone, offline and free, but only with its ten tools.

10. **Draft a general letter about sports day, with no names**

    A general letter with no names carries no pupil's personal data.
