Lesson plan · for the teacher

A school policy for agents

AI agents · Level 4 · Lesson 4

Time
40 min

Materials
The six policy questions on a poster or the board; Sticky notes or paper slips; A one-page policy template with six headings

Learning goals

- Answer the six questions of an agent policy.
- Keep pupils' data to the least, and decide who is responsible.
- Weigh cost and fairness, with a paper way for every pupil.

Activity: Policy workshop

1. Warm-up (5 min): Ask: where have you seen rules for phones or the internet at school? Who wrote them, and do people follow them?
2. Teach (8 min): Show the six questions. Give one example answer for each, and explain cost and fairness: data costs money, and some pupils have no phone at home.
3. Write (15 min): Each group takes one question and writes an answer in its own words on a slip, with one example from school life.
4. Build (8 min): Stick the slips under six headings on the board. Read the draft together and fix anything unclear or unfair.
5. Wrap-up (4 min): Agree a review date and who takes the draft to the head teacher. Then give the exit ticket.

Prepare the six questions on a poster and the one-page template. Use made-up examples only, with no real pupils' names or marks.

Discussion

- Which job should agents never do at our school?
- How do we keep things fair for pupils with no phone or data?
- Who should be our named lead, and why?

Exit ticket

- Write one rule for our agent policy, and which of the six questions it answers.

Try it at school tomorrow
Let pupils help write the policy: each group answers one of the six questions in its own words (which jobs, what data, who approves, how agents are tested, what records are kept, what happens when something goes wrong). Take their ideas, with your colleagues', to your head teacher.

Practice questions · for you

A school policy for agents

AI agents · Level 4 · Lesson 4

1 **An agent sends a wrong message to parents. Who is responsible?**

◯ The company that made the model ◯ The agent

◯ The school, through the person who approved it

2 **Match each policy question to a good answer.**

Which jobs?	• • • •	A named person says yes to every message to parents
What data?	• • • •	Tell the lead, switch it off, check the log, fix and test again
Who approves?	• • • •	Looking up and drafting; never grades or discipline
What if it goes wrong?	• • • •	No pupils' names or marks in cloud tools without a rule

3 **Which decisions should stay with people, with no agent deciding? Choose all that apply.**

☐ A punishment for a pupil ☐ Whether a child needs extra support ☐ Drafting a reading list

☐ Looking up tomorrow's weather ☐ A pupil's exam grade

4 **A cloud agent uses about 18 KB of data per request. A teacher makes 20 requests a day for 30 days. About how much data is that in a month?**

◯ About 11 MB ◯ About 1 MB ◯ About 110 MB

5 **A wrong message went out to parents. Put the policy's steps in order.**

☐ Switch the agent off and check the log

☐ Tell the named lead

☐ Fix the cause, in code if you can

☐ Test again, then switch it back on

☐ Tell the families affected

✎ **Which of the six questions would be hardest to agree on at your school, and why?**

Check your answers

A school policy for agents

AI agents · Level 4 · Lesson 4

1 **The school, through the person who approved it**

An agent can't be responsible. The school is, through the named person who approved the message, and the log shows who.

2 **Which jobs? — Looking up and drafting; never grades or discipline**
What data? — No pupils' names or marks in cloud tools without a rule
Who approves? — A named person says yes to every message to parents
What if it goes wrong? — Tell the lead, switch it off, check the log, fix and test again

Each question gets a concrete rule people can follow: jobs by the stakes, the least data, a named approver, and a plan for mistakes.

3 **A pupil's exam grade; A punishment for a pupil; Whether a child needs extra support**

Grades, punishments and decisions about a particular child affect that child directly, and need a person's judgement and responsibility.

4 **About 11 MB**

18 KB × 20 × 30 = 10,800 KB, about 11 MB a month for one teacher, against a one-time 2.8 MB download for a tiny model on the phone.

5 **Top to bottom: 2, 1, 4, 5, 3**

First stop more harm (tell the lead, switch it off), then find out what happened from the log, tell the people affected, fix the cause, and only switch it back on after the test passes.
