Review plan · for the teacher

Designing and governing agents at school: unit check

AI agents · Level 4 · Unit check

Time	Materials
45 min	Board, chalk, paper. No devices needed.

Learning goals

- Design an agent for a school job
- Permissions and approval, in code
- Evaluate before you trust
- A school policy for agents

Activity: Team quiz

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Write the hardest question on the board for tomorrow

Discussion

- Which idea will you use first at our school?
- Which question surprised you, and why?
- What would you tell the head teacher about agents now?

Exit ticket

- One rule for agents at our school, and who will check it

Try it at school tomorrow
Pick the habit from this unit you need most (the fewest tools, approval checked in code, a test set, or the one-page policy), use it this week, and tell a colleague how it went.

Quiz sheet · for each team

Designing and governing agents at school: unit check

AI agents · Level 4 · Unit check

Team _____ Date _____

1 **An agent will only help pupils find library books. Which design follows least privilege?**

- ◯ The library and attendance, to know who is in school
- ◯ The library tool only
- ◯ The library and send message, to tell parents
- ◯ All ten tools, so it never gets stuck

2 **In a planner and checker design, the checker should also be a language model, so it can understand the call.**

- ◯ True
- ◯ False

3 **Which of these should wait for a person's yes before the agent acts? Choose all that apply.**

- ☐ A reminder sent to a colleague
- ☐ Finding books on robots
- ☐ Looking up tomorrow's timetable
- ☐ Booking the school hall
- ☐ A message to all parents

4 **Match each idea to what it means.**

Least privilege	• • • •	A person's yes to one exact action
Approval	• • • •	Requests with known answers, run after every change
Audit log	• • • •	The fewest tools and the least data a job needs
Test set	• • • •	What was done, who approved it, and what was blocked

5 **A company says its agent "always asks before sending". What should the school still require?**

- ◯ An approval check in code, for the exact action, and a log
- ◯ Nothing more: the model asks
- ◯ A longer, more polite question from the model

6 **Put these in order, from first to last, for bringing an agent into school.**

- ☐ Start using it, with the log on
- ☐ Set the pass mark and run the test set
- ☐ Review it each term, and test again after changes
- ☐ Write the one-page design
- ☐ Set the permissions and the approval check

7 **Darsi Tiny's 16 of 16 on trained wordings says little about how it will handle new wordings from parents.**

◯ True ◯ False

8 **Complete the sentence.**

After Darsi Tiny learned a new tool with no old examples mixed in, it kept only _____ of its 8 old skills, so always test the _____ skills after every _____ .

Word bank: change · new · old · one · seven

9 **An agent drafted a wrong report comment, and the teacher signed it without reading it. Under a good policy, who is responsible?**

◯ The agent ◯ The pupil ◯ Nobody: it was a machine ◯ The teacher who signed it

10 **Which belong in a fair school policy for agents? Choose all that apply.**

☐ No review: rules shouldn't change ☐ A paper way, at school, for any task an agent helps with

☐ Pupils' names and marks in cloud tools only where a rule allows

☐ A named lead and a plan for mistakes ☐ Homework that needs a cloud agent at home

Answers · for the teacher

Designing and governing agents at school: unit check

AI agents · Level 4 · Unit check

1 **The library tool only**

The job needs only the library. Every extra tool is another way a misread request can do harm, and attendance is children's data the job doesn't need.

2 **False**

A checker made of a few strict rules in code never guesses: it catches slips such as 9Z copied as 9C, or a reminder at 25:00.

3 **A message to all parents; Booking the school hall; A reminder sent to a colleague**

Actions that reach other people or book something wait for a person's yes, checked in code.

4 **Least privilege — The fewest tools and the least data a job needs**
Approval — A person's yes to one exact action
Audit log — What was done, who approved it, and what was blocked
Test set — Requests with known answers, run after every change

These four ideas are the backbone of governing agents: limit what it can do, approve its actions, record them, and measure it.

5 **An approval check in code, for the exact action, and a log**

Asking first is learned behaviour, and it can fail with new wordings or a bare "Yes, send it." typed in Arabic.

6 **Top to bottom: 4, 3, 5, 1, 2**

Design first, then build in the controls, then test against a pass mark set in advance, and only then use it, keeping the log, reviewing it and testing again.

7 **True**

On new wordings it scored 13 of 16, and on the Arabic new wordings 6 of 8.

8 **After Darsi Tiny learned a new tool with no old examples mixed in, it kept only one of its 8 old skills, so always test the old skills after every change.**

With no old examples mixed in, it got 7 of 8 bus requests right but kept just 1 of 8 old skills.

9 **The teacher who signed it**

An agent can't be responsible. The person who approves and signs answers for every word, which is why the teacher reads and edits each draft.

10 **A paper way, at school, for any task an agent helps with; Pupils' names and marks in cloud tools only where a rule allows; A named lead and a plan for mistakes**

A fair policy works for pupils with no phone or data, protects children's data, names who acts when something goes wrong, and is reviewed because agents and laws change.
