Check what it did

AI agents · Lower secondary · Lesson 2

In this lesson you will

- Explain why an agent can be wrong and still sound sure.
- Check a call against the request, name by name.
- Use simple rules to stop slips before anything runs.

Key ideas

- Sounding sure is not the same as being right.
- Every name and number must come from your words or a tool’s result.
- Strict rules in code catch slips; a person decides the rest.

The checker game

1. Warm-up (3 min): Recall the five checker rules.
2. Write (7 min): Five requests, five calls, two hidden slips.
3. Check (7 min): Swap and decide: pass or stop?
4. Share (3 min): Which slip was hardest to spot?

Use only made-up names and requests. Paper and a pen are enough.

Let’s discuss

1. Why can’t an agent tell you when it’s wrong?
2. Which of the five rules would you trust most, and why?
3. When should a person check, even if the rules pass?

Exit ticket

- Write one slip an agent might make, and the rule that would stop it.
