Lesson plan · for the teacher

Spot the AI around you

AI · Level 1 · Lesson 1

Time
40 min

Materials
Board and chalk (or paper on the wall); 8 picture cards: draw them on scrap paper, or simply call out the names; Worksheet: AI detective (one per pair, optional)

Learning goals

- Say what AI is in our own words.
- Sort everyday tools into “learns from examples” and “follows a rule”, and explain why.
- Give one example of AI from our own lives.

Activity: Learns or follows a rule?: Sort it

1. Warm-up (5 min): Ask how a new pupil learns everyone’s names. Take 3–4 answers.
2. Teach (8 min): Draw a solar lamp and a clock: “6 pm → on”. Then draw a phone keyboard suggesting a word. Write the one-sentence definition of AI on the board.
3. Sort it (12 min): Hold up or call out each card. Pupils vote: left hand up for “follows a rule”, right hand for “learns from examples”. Place the card in a box and ask one pupil to explain.
4. Pair talk (8 min): Pairs think of one more thing at home, at school or in the market that might use AI. Collect three ideas and let the class decide which box.
5. Wrap-up (7 min): Exit ticket: each pupil writes or says one sentence starting “AI is…” and one example.

Draw two large boxes on the board and label them “Learns from examples” and “Follows a rule”. Prepare 8 cards: calculator, voice typing, school bell, spam filter, solar lamp timer, phone keyboard, flood alert, traffic light.

Discussion

- Did someone give you a rule for every face, or did you learn by seeing people many times?
- Why do you think so?
- What examples would it need to learn from?

Exit ticket

- AI is… (one sentence) + one example from my life.

Try it in class tomorrow
Play “Learns or follows a rule?”: Draw two boxes on the board: “Learns from examples” and “Follows a rule”. Call out eight everyday things — calculator, voice typing, school bell, spam filter, solar lamp timer, phone keyboard, flood alert, traffic light. Pupils point to a box and explain why.

Worksheet · for pupils

Spot the AI around you

AI · Level 1 · Lesson 1

Name _____ Class _____ Date _____

1 **Which sentence best describes AI?**

- ◯ A program that always gives the right answer
- ◯ A robot that thinks exactly like a person
- ◯ A computer system that learns from examples and makes predictions
- ◯ Any machine that works by itself

2 **Which of these use AI?**

- ☐ An email spam filter
- ☐ A solar lamp on a 6 pm timer
- ☐ Keyboard next-word suggestions
- ☐ A calculator
- ☐ Voice typing on a phone

3 **AI always means a robot.**

◯ True ◯ False

4 **Match each tool to what it predicts.**

Keyboard suggestions	• • • •	The words you just said
Spam filter	• • • •	The next word you will type
Voice typing	• • • •	Where a river may flood
Flood forecast	• • • •	Whether a message is junk

5 **Complete the sentence.**

AI learns _____ from _____ and uses them to make _____.

Word bank: rules · patterns · examples · electricity · predictions

Answers · for the teacher

Spot the AI around you

AI · Level 1 · Lesson 1

1 **A computer system that learns from examples and makes predictions**

AI is a computer system that learns from examples and makes best guesses (predictions).

2 **Voice typing on a phone; Keyboard next-word suggestions; An email spam filter**

Voice typing learned from many recordings of people speaking, next-word suggestions learned patterns from how people write, and a spam filter learned what junk messages usually look like.

3 **False**

Most AI is software inside tools you already use, like your keyboard, voice typing or spam filter.

4 **Keyboard suggestions — The next word you will type**
Spam filter — Whether a message is junk
Voice typing — The words you just said
Flood forecast — Where a river may flood

Every AI tool makes a prediction of some kind — a word, a yes/no, or a place.

5 **AI learns patterns from examples and uses them to make predictions.**

Patterns from examples, then predictions — that's the whole idea in one line.

For you to think about

Think of one app you or your pupils use. Does it learn from examples or follow a rule? What does it predict?
