Generate, then check

AI · Level 2 · Lesson 3

Today we will

- Find mistakes in a worksheet by checking the textbook.
- Give evidence for every mistake we find.
- Spot examples that don’t fit our lives, and improve them.

Remember

- AI can write fast, but it can be wrong: everything it makes is a draft.
- Check facts, level, bias and local fit before trusting it.
- A person is responsible for what reaches the class.

Find the mistakes

1. Warm-up (5 min): Read one AI sentence that sounds right but is wrong.
2. Teach (7 min): The four checks: facts, level, bias, local fit.
3. Find the mistakes (15 min): Pairs check the worksheet against the textbook.
4. Evidence (8 min): Pairs share each error and the page that proves it.
5. Wrap-up (5 min): Fix one example together, then the exit ticket.

Before class, make a one-page worksheet with AI, check it, then plant three to five mistakes: a wrong fact, a word too hard for the class, a stereotype, a foreign example. Keep your answer key. Make one copy per pair, or copy the worksheet onto the board.

Let’s discuss

1. Which mistake was hardest to find, and why?
2. Why is evidence better than speed?
3. Who should check what a machine writes before pupils use it?

Exit ticket

- Write one mistake you found and the page that proves it.
