Lesson plan · for the teacher

Assessment when pupils have AI

AI · Level 4 · Lesson 3

Time
40 min

Materials
Pupils' homework or exercise books; A watch or phone to time two minutes; Board and chalk, with the question "Why did you do it that way?"

Learning goals

- Explain one step of our homework aloud, in our own words.
- Ask and answer "Why did you do it that way?"
- Say what explaining shows that a written answer can't.

Activity: Show your thinking

1. Warm-up (5 min): Write a maths answer on the board with no working, such as "x = 7". Ask: how do we know the pupil understood? Could they have copied it?
2. Model (7 min): Solve a short problem aloud, step by step. Invite pupils to stop you at any step and ask "Why?", and answer each time.
3. Pairs (16 min): Pupils take out their homework. In pairs, one explains a step for two minutes while the partner listens and then asks "Why did you do it that way?". Swap. Time it aloud, and walk round listening.
4. Share (7 min): Ask three pairs what the question "Why?" showed: a step they understood well, or a gap they found. Write the gaps on the board.
5. Wrap-up (5 min): Agree when the class will show its thinking (plans, drafts, talk) and how to add a short note if AI helped. Then give the exit ticket.

Use homework pupils have already done, in any subject. There are no marks for this activity: it is about explaining, not catching anyone. Note common gaps for your next lesson.

Discussion

- When did explaining help you notice a mistake?
- Why might a right answer with no working not show what someone knows?
- If AI helped with homework, what is an honest way to say so?

Exit ticket

- One step I can explain well, and one step I need help with.

Try it at school tomorrow
Play "Show your thinking": Pupils pair up with yesterday's homework. Each explains one step aloud for two minutes, and the partner asks one question: "Why did you do it that way?" Walk round and listen to a few pairs. Finish by asking: what did explaining show that the written answer didn't?

Practice questions · for you

Assessment when pupils have AI

AI · Level 4 · Lesson 3

1 **Mr Okafor sets a take-home report on the local market. Some pupils have chatbots at home. How can he best see what each pupil learned?**

- ◯ Check every report with a detector before marking it
- ◯ Have each pupil explain their report aloud
- ◯ Ban phones at home while pupils write the report

2 **Which changes make the learning in a homework task easier to see? Choose all that apply.**

- ☐ Base it on an interview with someone local
- ☐ Make the essay longer
- ☐ Run every answer through a detector
- ☐ Add a two-minute talk about the work
- ☐ Ask for a plan and a first draft

3 **Match each task to a sensible AI-use level.**

A spelling test in class	• • • •	Level 1: ideas only
Choosing a topic for a project	• • • •	Level 3: AI allowed — show how
Improving a story a pupil has drafted	• • • •	Level 0: no AI
A report on testing an AI tool	• • • •	Level 2: comments on the pupil's own draft

4 **A detector that is right 95% of the time is safe to use as proof that a pupil cheated.**

- ◯ True
- ◯ False

✎ **Pick a task you set often. How could you redesign it so the learning shows, and which AI-use level would you give it?**

Check your answers

Assessment when pupils have AI

AI · Level 4 · Lesson 3

1 **Have each pupil explain their report aloud**

When pupils explain their work aloud, you hear what they understand, whoever helped with the writing.

2 **Ask for a plan and a first draft; Add a two-minute talk about the work; Base it on an interview with someone local**

Plans, drafts, talk and local content all show the pupil's own thinking.

3 **A spelling test in class — Level 0: no AI**
Choosing a topic for a project — Level 1: ideas only
Improving a story a pupil has drafted — Level 2: comments on the pupil's own draft
A report on testing an AI tool — Level 3: AI allowed — show how

The level follows the learning goal: a spelling test checks what pupils know unaided, while a report on testing an AI tool needs the tool itself.

4 **False**

Wrong one time in twenty means about three wrong verdicts in a class of sixty, and the errors fall more often on second-language writers.
