Lesson notes · for you

Who decides what's fair?

AI · Level 4 · Lesson 1

Time
27 min

Materials
A notebook and pen; Friends, classmates or family for the debate; A phone with the Darsi app (for the lab)

Learning goals

- Ask five questions of any AI: fair, private, open, responsible, agreed.
- Explain why the values inside an AI are people's choices.
- Describe the harm of deepfakes and of AI used to watch people, and what you can do.

Activity: The five-question debate

1. Warm-up (3 min): Each person lists three AIs that decide things about them or their family, such as face unlock, video suggestions, a spam filter or a map that picks a route.
2. Five questions (6 min): Choose one of them and ask the five questions: is it fair, private, open, who is responsible, and did people agree? Mark each answer as known or unknown.
3. Prepare (6 min): Split into two sides on "Should our school use face recognition for attendance?". Each side writes at least one point for each of the five questions.
4. Debate (8 min): Each side speaks for two minutes, then answers one question from the other side. Keep it respectful: argue about the camera, not about people.
5. Vote (4 min): Everyone votes. Then each person says one thing that would change their mind, such as a promise that photos are deleted every day.

For a group of friends, a class or your family. You need paper and a pen; no phone is needed.

Discussion

- Which of the five questions matters most to you, and why?
- Who should decide which mistake a school camera treats as worse?
- What would you do if a fake voice note of a teacher reached your class group?

Check yourself

- Name one AI you use, and one of the five questions it hasn't answered for you.

Try it this week
Hold a short debate at home or in class: should our school use face recognition for attendance? Both sides use the five questions; then vote, and each person says what would change their mind.

Worksheet

Who decides what's fair?

AI · Level 4 · Lesson 1

Name _____ Class _____ Date _____

1 **Your school's new camera recognises every student correctly, whatever their face or skin. Does that settle whether the school should use it?**

- ◯ Yes: if it's accurate for everyone, it's fine
- ◯ No: privacy, openness, responsibility and consent still need answers
- ◯ Yes: accuracy is the only thing that matters for a machine

2 **Match each worry about a school face camera to the question it raises.**

It makes more mistakes with darker skin	• • • •	Is it open?
A company keeps the photos for years	• • • •	Did people agree?
Nobody can say why a student was marked absent	• • • •	Who is responsible?
When it's wrong, there's nobody to complain to	• • • •	Is it fair?
Parents were never asked	• • • •	Is it private?

3 **Even an AI trained only on data has human values built into its decisions.**

◯ True ◯ False

4 **Complete the sentence.**

AI ethics asks whether an AI is _____ to use, not only whether it _____. The _____ inside it are choices that people made.

Word bank: fast · values · right · secret · works

✎ **Think of an AI you or your family use: face unlock, a map, a video app or a voice assistant. Which of the five questions would you most like answered about it, and why?**

Check your answers

Who decides what's fair?

AI · Level 4 · Lesson 1

1 **No: privacy, openness, responsibility and consent still need answers**

Working as well for everyone answers the first question: fairness.

2 **It makes more mistakes with darker skin — Is it fair?**
A company keeps the photos for years — Is it private?
Nobody can say why a student was marked absent — Is it open?
When it's wrong, there's nobody to complain to — Who is responsible?
Parents were never asked — Did people agree?

Each worry points to one of the five questions: mistakes that fall on some groups (fair), photos kept by others (private), decisions nobody can explain (open), no one to answer for errors (responsible), and no say for the people affected (agreed).

3 **True**

People chose its goal, its data and which mistake counts as worse, and even the data reflects choices about what was collected and from whom.

4 **AI ethics asks whether an AI is right to use, not only whether it works. The values inside it are choices that people made.**

Ethics looks beyond whether an AI works, to whether it is right to use.
