Lesson notes · for you

AI and the work of tomorrow

AI · Level 4 · Lesson 2

Time
25 min

Materials
A notebook and pen; An adult to interview about their work; A phone with the Darsi app (for the lab)

Learning goals

- Explain that AI changes tasks more than whole jobs, and creates new work.
- Name AI work near you and the people behind AI.
- Plan the skills to build: data, judgement, ethics, working with people.

Activity: Task sort

1. Warm-up (3 min): Each person names a job in their family or street, such as a market trader, a driver, a nurse or a farmer.
2. Task list (6 min): Choose one of the jobs and break it into six to eight tasks, one per strip of paper: for a trader, buying stock, setting prices, counting money, talking to customers and so on.
3. Sort (6 min): Sort each task into “AI could help”, “AI could do it” or “Needs a person”. Then count how many tasks AI could do completely on its own, and say why.
4. New work (5 min): List three jobs that exist because of AI, such as data labeller, model tester, or the person who checks AI-typed notes, and say what each one does.
5. Skills (5 min): Each person picks one skill to build this term (maths and data, judging information, ethics, or working with people) and one small step to start this week.

For a study group or at home with your family. You need paper and a pen; scraps of paper work as task strips.

Discussion

- Which task in your family’s work could AI help with, and which should it never do?
- Is it fair if the people who label AI’s data are paid very little? What could change that?
- Which skill from this lesson will you start building first?

Check yourself

- One task AI could help with near me, and one skill I will build.

Try it this week
Interview an adult about their work: ask for one task AI could help with, and one it never should, then ask them why.

Worksheet

AI and the work of tomorrow

AI · Level 4 · Lesson 2

Name _____ Class _____ Date _____

1 **As AI spreads, which skill becomes more valuable?**

- ◯ Memorising facts word for word
- ◯ Typing faster than anyone else
- ◯ Judging whether information is true

2 **Match each worker to a way AI could change one of their tasks.**

Farmer	• • • •	Checks AI-typed notes for a wrong dose
Nurse	• • • •	Photographs a leaf to check for disease
Bus planner	• • • •	Checks and corrects an AI's first draft of a translation
Translator	• • • •	Uses AI to group homes into stops

3 **If AI can do one task in a job, the whole job will disappear.**

◯ True ◯ False

4 **Complete the sentence.**

When AI does a task _____ of a person, that's automation. When it _____ a person do it better, that's augmentation. Either way, someone has to _____ the results.

Word bank: ignore · check · instead · sells · helps

✎ **Think of a job you might like one day. Name one task in it that AI could help with, and one that will always need a person. Why?**

Check your answers

AI and the work of tomorrow

AI · Level 4 · Lesson 2

1 **Judging whether information is true**

AI can produce facts, summaries and answers in seconds, but they can be wrong.

2 **Farmer — Photographs a leaf to check for disease**
Nurse — Checks AI-typed notes for a wrong dose
Bus planner — Uses AI to group homes into stops
Translator — Checks and corrects an AI's first draft of a translation

In each case one task changes and the person stays: the farmer still decides what to do about the disease, the nurse checks what the AI typed, the planner chooses how many stops, and the translator's knowledge of both languages is what catches the AI's mistakes.

3 **False**

A job is many tasks. AI usually takes over or speeds up some of them, and the person spends more time on the rest, like a doctor who types less and spends more time with patients.

4 **When AI does a task instead of a person, that's automation. When it helps a person do it better, that's augmentation. Either way, someone has to check the results.**

Automation means the AI does the task instead of a person; augmentation means it helps a person do it better.
