AI and the work of tomorrow

AI · Level 4 · Lesson 2

Today we will

- Explain that AI changes tasks more than whole jobs, and creates new work.
- Name AI work near you and the people behind AI.
- Plan the skills to build: data, judgement, ethics, working with people.

Remember

- A job is a bundle of tasks: AI usually changes some of them.
- New work appears: labelling data, building, testing and checking AI, and it deserves fair pay.
- Build skills to work with AI and check it: judging information, ethics, working with people.

Task sort

1. Warm-up (3 min): Each person names a job in their family or street.
2. Task list (6 min): Break one job into six to eight tasks on paper strips.
3. Sort (6 min): Sort the tasks into “AI could help”, “AI could do it” and “Needs a person”.
4. New work (5 min): List three jobs that exist because of AI.
5. Skills (5 min): Each person picks one skill to build this term.

For a study group or at home with your family. You need paper and a pen; scraps of paper work as task strips.

Let’s discuss

1. Which task in your family’s work could AI help with, and which should it never do?
2. Is it fair if the people who label AI’s data are paid very little? What could change that?
3. Which skill from this lesson will you start building first?

Exit ticket

- One task AI could help with near me, and one skill I will build.
