Lesson notes · for you

Design an AI solution

AI · Level 4 · Lesson 3

Time
28 min

Materials
A notebook and pen; Two people who have the problem you choose; A phone with the Darsi app (for the lab)

Learning goals

- Start from a real local problem and its people, and ask whether AI is needed.
- Plan the data: where from, with whose permission, and what the AI does with it.
- Plan for harm: who could be hurt, and how a person stays in charge.

Activity: Design sprint

1. Problems (4 min): Each person lists two problems they see at school or nearby: lost information, long queues, crops lost to disease, water shortages, buses that come late.
2. Choose (4 min): The group picks one problem and writes it in one sentence: who has it, when, and what it costs them.
3. Simple fix? (5 min): List the simplest fix without AI, such as a notice board, a phone call or a rota. Decide honestly whether AI is needed, and write why.
4. Plan (10 min): On one page, fill in the five headings: the problem and its people; is AI needed; the data and whose permission; what the AI does; what happens when it's wrong, and the person in charge.
5. Harm check (5 min): Swap plans with another group. Find one way their plan could hurt someone or leave someone out, and suggest one safeguard.

For a group of three or four, at school or at home. You need a large sheet of paper and pens.

Discussion

- Which problem near you would you most like to solve, and who has it?
- When is a notice board better than an AI?
- Who should be in charge when your AI makes a mistake?

Check yourself

- My problem, who has it, and whether AI is really needed.

Try it this week
Write a one-page plan for an AI that helps your school or community: the problem and its people, whether AI is needed, the data and permission, and what happens when it's wrong.

Worksheet

Design an AI solution

AI · Level 4 · Lesson 3

Name _____ Class _____ Date _____

1 **A student asks the school helper something that isn't in the school's documents. What should the helper do?**

◯ Give its best guess, confidently ◯ Say it doesn't know, and point to the office

◯ Search social media and repeat what it finds

2 **Put the steps of an AI design plan in order.**

☐ Plan the data, with permission, and what the AI does with it

☐ Find a real problem and the people who have it

☐ Plan for mistakes, with a person in charge

☐ Ask whether AI is needed at all

3 **Which data should the school helper use? Choose all that fit.**

☐ The school rules ☐ The exam timetable ☐ Students' marks, with their names

☐ The bus times ☐ Parents' phone numbers

4 **Complete the sentence.**

Start with a real _____ and its people. Plan the _____ you need, and ask for _____ to use it. Keep a _____ in charge.

Word bank: data · problem · secret · tool · permission · person

✎ **Think of a problem near you, at school, at home or in your community. Who has it, and would a simple fix solve it, or is AI really needed? Why?**

Design an AI solution

AI · Level 4 · Lesson 3

1 **Say it doesn't know, and point to the office**

An honest "I don't know, ask the office" is safer than a confident guess, which could leave a student with a wrong exam date or bus time.

2 **Top to bottom: 3, 1, 4, 2**

People and their problem come first, because they decide whether AI is needed at all.

3 **The exam timetable; The bus times; The school rules**

The helper answers general questions, so it needs only the school's shared documents.

4 **Start with a real problem and its people. Plan the data you need, and ask for permission to use it. Keep a person in charge.**

A design starts from a problem, not a tool.
