Lesson notes · for you

Test and pitch it

AI · Level 4 · Lesson 4

Time
29 min

Materials
Paper and pens for drawing screens; A timer (any phone or watch); Two people to test with, and an audience for your pitch; A phone with the Darsi app (for the lab)

Learning goals

- Test a paper prototype with real users, and change it.
- Explain how your AI decides, in words a user understands.
- Pitch it in two minutes: problem, users, data, how it works, risks, trust.

Activity: Pitch practice

1. Prototype (6 min): Draw two or three phone-sized screens of your idea on paper, such as a question box, an answer with its source, and an “I don’t know” screen.
2. Test (6 min): One person plays the user and tries a real question; another plays the AI and swaps the screens. Nobody helps or explains; the rest note every place the user hesitates.
3. Change (4 min): Choose the biggest problem from the notes and redraw that screen to fix it.
4. Pitch (8 min): Each person or team pitches for two minutes, with a timer: the problem and who has it, the users and what changed, the data and permission, how it works, the risks and why it can be trusted.
5. Questions (5 min): Listeners ask questions, and the team writes each one down without arguing. Circle the question that shows the biggest worry: that is the next thing to improve.

For a group or your family. You need paper, pens and a timer (any phone or watch).

Discussion

- What did your user find confusing, and why didn’t you notice it yourself?
- How would you explain your AI to a grandparent in one sentence?
- Why does naming the risks make people trust a pitch more?

Check yourself

- One sentence explaining how my AI decides, in my user’s words.

Try it this week
Pitch your solution in two minutes to your class, your family or your school’s AI club, and collect three questions to improve it.

Worksheet

Test and pitch it

AI · Level 4 · Lesson 4

Name _____ Class _____ Date _____

1 **You have two minutes to pitch your school helper to the head teacher. Which of these belongs in a pitch people can trust?**

- ◯ The risks, and how you'll handle them
- ◯ Technical words, so you sound expert
- ◯ Only what goes right, so you sound confident

2 **Put the steps of testing a paper prototype in order.**

- ☐ Write down what confused them
- ☐ Change the design and test again
- ☐ Draw each screen on paper
- ☐ Watch where they get stuck, without helping
- ☐ A user tries it while you play the AI

3 **A decision tree is easier to explain than a big chatbot model, because you can follow the questions it asked.**

◯ True ◯ False

4 **Match each technical phrase to a plain explanation a user would understand.**

"It runs a ranking algorithm"	• • • •	It has never seen anything like this before
"Low confidence score"	• • • •	It finds the document closest to your question
"Out-of-distribution input"	• • • •	A teacher checks before anything happens
"Human in the loop"	• • • •	It isn't sure, so check with a person

✎ **Imagine testing your idea, or a school helper, with someone in your family. What might confuse them, and what would you change?**

Check your answers

Test and pitch it

AI · Level 4 · Lesson 4

1 **The risks, and how you'll handle them**

Naming the risks, and your plan for them, shows you've thought it through, and that builds trust.

2 **Top to bottom: 4, 5, 1, 3, 2**

You build the screens, let a real user try them while you play the AI, watch silently, note the trouble spots, then change the design and test again.

3 **True**

A tree's decision is a path of questions, such as "Is it sunny?

4 **"It runs a ranking algorithm" — It finds the document closest to your question**
"Low confidence score" — It isn't sure, so check with a person
"Out-of-distribution input" — It has never seen anything like this before
"Human in the loop" — A teacher checks before anything happens

Each plain version says what the AI does and what the user should do about it.
