Sequences and the memory that fades

University, 3

One symbol at a time

- The state is the memory
- Empty steps still multiply it

The fade

- Small memory, cue gone
- Large memory, cue remains

Predict, then slide

1. Predict (5 min): The end number.
2. By hand (10 min): Multiply the state.
3. Lab (15 min): Memory low, then memory high.
4. Name it (10 min): The fade.
5. Exit (5 min): Write the number.

Ask

1. What would a longer gap do?

Exit ticket

- Does the end still know the cue? Write the number.
