Science stand-ins, and one machine

University, scale 4

A stand-in

- Fast where it was tested
- Not the experiment

Memory

- Weights, gradients, optimizer state, activations
- Split the layer when it is wide

In the lab

1. Wide layer, both splits
2. Large batch, narrow layer: split the examples

Ask

1. What does a bigger machine not answer?

Exit ticket

- Wide layer: which split fits?
