Lesson plan · for the teacher

What you type can travel

AI security · Level 1 · Lesson 1

Time
40 min

Materials
Green, amber and red cards for each group (or coloured pencils); A list of ten things someone might type into an app, from “a story about a lion” to “my password”; Board and chalk

Learning goals

- Explain where what you type into an AI tool can go.
- Sort information into green, amber and red.
- Ask for help without giving a pupil away.

Activity: Green, amber, red

1. Warm-up (5 min): Ask pupils which apps or games they type into, at home or on a family phone. List them on the board and ask: what does each one know about you?
2. Teach (8 min): Explain that typed words leave the phone: they go to the company's computers and may be kept or read. Teach the noticeboard test: would you pin it on the school noticeboard? If not, don't type it.
3. Green, amber, red (15 min): Read out ten items, from “a story about a lion” to “my password”. Groups hold up a green, amber or red card for each; ask one group to explain each red card.
4. Fix it (7 min): Groups rewrite two red items so they could be typed safely, for example “my full name and school” becomes “a pupil in Primary 5”. Share two rewrites with the class.
5. Wrap-up (5 min): Agree one class rule and write it on the wall. Then give the exit ticket.

Prepare ten items, from harmless (“a story about a lion”, “my favourite colour”) to red (“my password”, “my home address”, “my friend's photo”). Cards can be squares of paper coloured with pencils.

Discussion

- Why might an app keep what you type?
- Which item was the hardest to sort, and why?
- How can you get help without saying who it is about?

Exit ticket

- Write one red thing you will never type into an app, and a safe way to ask for help instead.

Try it in class tomorrow
Play “Green, amber, red”: read out things someone might type into an app, and pupils hold up a green, amber or red card and say why. Agree one class rule and write it on the wall.

Worksheet · for pupils

What you type can travel

AI security · Level 1 · Lesson 1

Name _____ Class _____ Date _____

1 **A colleague wants a chatbot to draft a letter home about a fight in class. Which is safe to type?**

- ◯ "Two pupils had a fight; write a calm letter to parents"
- ◯ A photo of the incident report
- ◯ The pupils' names and what each one did

2 **Which of these can happen to what you type into a free chatbot? Choose all that apply.**

- ☐ It is kept in your chat history
- ☐ The next person on a shared phone reads it
- ☐ Staff at the company read it to check quality
- ☐ It disappears the moment you close the app
- ☐ It trains future models, unless you switch that off

3 **Match each risk to what protects against it.**

A shared staffroom computer	• • • •	Switch training off in the settings
Chats used to train models	• • • •	Sign out and clear the history
A photo of marked work	• • • •	Describe the situation, not the child
A report about one pupil	• • • •	Cover the name first

4 **Leaving pupils' names out of a prompt usually makes the chatbot's help much worse.**

- ◯ True
- ◯ False

5 **Put in order: getting help with a report without giving the pupil away.**

- ☐ Ask the chatbot for a draft
- ☐ Describe the situation without a name
- ☐ Add the name outside the chatbot
- ☐ Check the draft yourself

Answers · for the teacher

What you type can travel

AI security · Level 1 · Lesson 1

1 **"Two pupils had a fight; write a calm letter to parents"**

The situation is enough for a good letter.

2 **It is kept in your chat history; Staff at the company read it to check quality; It trains future models, unless you switch that off; The next person on a shared phone reads it**

Your words travel to servers and histories; some services let staff read samples and use chats for training unless you switch it off; and a shared device keeps the history for the next person.

3 **A shared staffroom computer — Sign out and clear the history**
Chats used to train models — Switch training off in the settings
A photo of marked work — Cover the name first
A report about one pupil — Describe the situation, not the child

Each risk has a habit that closes it: sign out on shared devices, switch training off, hide names in photos, and describe situations instead of children.

4 **False**

The chatbot works from the situation: age, class size, resources and what you want.

5 **Top to bottom: 2, 1, 4, 3**

Describe first, without a name; get a draft; check it, since it is your report; then add the name yourself, on paper or in the school system.

For you to think about

What do you type into AI tools today, or would like to? Sort it: what is green, what is amber and what is red?
