Lesson plan · for the teacher

Who wrote this? Detectors and fair rules

AI security · Level 1 · Lesson 4

Time
40 min

Materials
A large sheet of paper or the board for the rules; Markers or chalk; The five rules written as headings: keep it out, check it, verify it, be fair, tell someone

Learning goals

- Explain how AI detectors and watermarks guess.
- Say why a detector's score is never proof.
- Agree five fair rules for AI in our class.

Activity: Our five AI rules

1. Warm-up (5 min): Ask: could a computer tell whether you or a machine wrote your homework? Collect ideas, then explain that it can only guess.
2. Teach (8 min): Explain that detectors look for patterns and give a score, and that honest work is sometimes flagged. Tell a made-up story of a pupil wrongly accused, and ask how she felt.
3. Rules (15 min): Write the five rules as headings. For each one, pupils say what it means and give one example from their own lives. Write their words under the heading.
4. Agree (7 min): Agree what happens when a rule is broken, and that anyone can report a problem without getting into trouble.
5. Wrap-up (5 min): Put the rules on the wall. Then give the exit ticket.

With young pupils, keep the rules short and add a picture for each. With older pupils, add when AI is allowed for homework and how to show it was used.

Discussion

- Why can't a detector be sure who wrote something?
- How would it feel to be wrongly accused?
- Which of our five rules matters most to you, and why?

Exit ticket

- Write the five rules from memory, and one example for your favourite.

Try it in class tomorrow
Write your five AI rules with your class: keep it out, check it, verify it, be fair, tell someone. Let pupils put each rule in their own words, then put the rules on the wall.

Worksheet · for pupils

Who wrote this? Detectors and fair rules

AI security · Level 1 · Lesson 4

Name _____ Class _____ Date _____

1 **Which of these is a fair class rule about AI?**

- ◯ "A detector score over 80% means zero."
- ◯ "If the AI says it's right, it's right."
- ◯ "Say when you used AI, and be ready to explain your work."

2 **Match each class rule to what it means.**

Keep it out	• • • •	The higher the stakes, the stronger the check
Check it	• • • •	No secrets or personal data in AI tools
Verify it	• • • •	No one is accused on a detector's score
Be fair	• • • •	Report problems without fear of trouble
Tell someone	• • • •	Check fakes and urgent requests on a second channel

3 **Editing a few words of a watermarked text can make a detector miss it.**

- ◯ True
- ◯ False

4 **A detector flags an essay. Which are fair next steps? Choose all that apply.**

- ☐ Talk with the pupil privately
- ☐ Look at their notes and drafts
- ☐ Give zero and close the case
- ☐ Tell the class who was flagged
- ☐ Ask them to explain their work or write a paragraph in class

5 **Put in order: handling a suspected AI essay fairly.**

- ☐ Talk with the pupil privately
- ☐ Decide using all the evidence
- ☐ Note what seems odd in the essay
- ☐ Ask them to explain their work or show drafts

Answers · for the teacher

Who wrote this? Detectors and fair rules

AI security · Level 1 · Lesson 4

1 **"Say when you used AI, and be ready to explain your work."**

A fair rule is clear in advance and rests on what pupils can show: saying when they used AI and explaining their work.

2 **Keep it out — No secrets or personal data in AI tools**
Check it — The higher the stakes, the stronger the check
Verify it — Check fakes and urgent requests on a second channel
Be fair — No one is accused on a detector's score
Tell someone — Report problems without fear of trouble

Each rule sums up one lesson of this unit: what you type, wrong answers, fakes, detectors, and a class where people speak up.

3 **True**

A watermark lives in the word choices, so changing two or three of them thins out the green words and the signal fades.

4 **Talk with the pupil privately; Look at their notes and drafts; Ask them to explain their work or write a paragraph in class**

Fair steps gather evidence the pupil can answer: a private talk, drafts, an explanation.

5 **Top to bottom: 2, 4, 1, 3**

Start from the work itself, then hear the pupil, then look at what they can show, and only then decide, on everything you have, never on a score alone.

For you to think about

How would your pupils feel if they were wrongly accused of using AI? What will you do to make sure it doesn't happen in your class?
