Orders hidden in the data

AI security · Level 2 · Lesson 1

Today we will

- Explain how an order hidden in a text can steer an AI.
- Find where hidden orders could reach AI tools at school.
- Name the defences that hold.

Remember

- To the model, your instructions and the data are all text.
- Injection is typed in, or hidden in what the AI reads.
- Outside text is data; a person decides before anything acts.

Human chatbot

1. Warm-up (5 min): Who reads your post, your messages, your homework?
2. Teach (8 min): An AI reads everything as one stream of text.
3. Human chatbot (15 min): A pupil summarises a letter, following every line.
4. Play again (7 min): The new rule: the letter is data, not the boss.
5. Wrap-up (5 min): List AI tools that read others' words; exit ticket.

Write the letter before class and keep the hidden order in the middle, in the same handwriting as the rest, so it doesn't stand out. Use a harmless order, such as announcing no homework.

Let’s discuss

1. Why did the assistant follow the hidden order?
2. Where do the apps you use read words written by other people?
3. What rule would stop the hidden order?

Exit ticket

- Write one place an AI reads text someone else wrote, and one rule that keeps it safe.
