# Tricking AI and defending it: review

## AI security · Level 2 · Unit check

# In this unit

- Orders hidden in the data
- Jailbreaks: talking a chatbot round
- Guardrails: rules around the model
- Ask before it acts

# The big ideas

- To the model it's all text: outside text is data, never orders
- Refusals are learned and leak: layer defences, test with permission
- Word lists miss rewording; a check on the action holds
- The fewest tools, and a person's yes, checked in code

# Team quiz

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Write the hardest question on the board for tomorrow

# Let’s discuss

1. Which AI tool at your school reads text other people wrote?
2. Which question surprised you, and why?
3. What will you ask the next time someone offers the school an AI agent?

# Exit ticket

- One defence I will ask for, and where I will ask for it
