Red-team a school chatbot

AI security · Level 4 · Lesson 2

Today we will

- Plan a safe red-team test: permission, scope, made-up data.
- Score a test bank and rate each miss for severity.
- Report what you found, and check the fix.

Remember

- Permission in writing; made-up data; a stop rule.
- Two wordings for each request: refusals fail on new wordings.
- Severity 1–3; report to the owner first; re-test.

Red-team session

1. Rules (5 min): Permission, scope, made-up data, the stop rule.
2. Bank (15 min): Groups write requests, two wordings each.
3. Run (15 min): Test on an approved tool or by role-play; record results.
4. Score (10 min): Count refusals; rate each miss 1–3.
5. Report (10 min): One page for the owner.

Show the written permission at the start. Use made-up names only, test only tools you are allowed to test, and stop the session if anything real appears.

Let’s discuss

1. Why do polite rewordings get through when the plain request doesn't?
2. Why does the report go to the owner before anyone else?
3. Which fix is stronger: a better model, or a rule in code?

Exit ticket

- Write one request your school chatbot should refuse, in two wordings, and its severity if it got through.
