Lesson plan · for the teacher

When AI goes wrong

AI security · Level 4 · Lesson 4

Time
20 min

Materials
An incident story printed for each table (the fake voice note, or a pasted class list); Cards to write the agreed steps on; The names of your school's data lead and head teacher, and the provider's report link

Learning goals

- Recognise the kinds of AI incident at school.
- Respond in order: contain, protect, keep evidence and report, learn.
- Run a short drill with staff, and teach pupils what to do.

Activity: A 20-minute incident drill

1. Set-up (2 min): Give each table a printed story: the fake voice note asking parents for fees, or a class list with health notes pasted into a public chatbot. Ask each table to choose a note-taker.
2. Contain and protect (6 min): Tables list what they would do in the first hour to stop the harm growing and to look after the people affected, including how parents would be warned.
3. Evidence and report (5 min): Tables decide what to record (time, sender, where, what was shared), who to tell in school, the provider, and whether the regulator must hear, often within 72 hours.
4. Learn (4 min): Tables name what let it happen and one change that fixes the cause, such as a code word for money requests or training switched off.
5. Agree (3 min): Compare tables, agree one set of steps with names and numbers, write it on a card and pin it up in the staffroom.

Use made-up names in the stories. Keep the tone calm and blame-free: the drill is practice, not a test of anyone. If your school already runs a cyber drill, add this story to it.

Discussion

- Why does containment come before writing the report?
- How do we warn parents without spreading the fake?
- What would make staff report a mistake straight away?

Exit ticket

- Write the first three things you would do if a pupil's data leaked through an AI tool, and who you would tell.

Try it at school tomorrow
Run a 20-minute AI incident drill at a staff meeting: read out the fake voice-note story, let each table decide the steps (contain, protect people, keep evidence and report, learn), then pin the agreed steps and the names of who to tell in the staffroom.

Practice questions · for you

When AI goes wrong

AI security · Level 4 · Lesson 4

1 **A fake picture of a pupil is spreading in a class group. Who do you help first?**

◯ The pupil who made it ◯ The app company ◯ The pupil in the picture

2 **Put the response to an AI incident in order.**

☐ Keep the evidence and report

☐ Contain it

☐ Learn and fix the cause

☐ Protect the people affected

3 **Match each incident to something to do in the first hour.**

A class list pasted into a public chatbot	• • • •	Pause the agent and switch on approval
A fake voice note asking parents for fees	• • • •	Delete the chat and its history
An agent sent a message nobody approved	• • • •	Change the password now
A staff password typed into a chatbot	• • • •	Warn parents on the school's usual channel

4 **Which belong in "keep the evidence"? Choose all that apply.**

☐ Forward the fake to all staff so they know ☐ Reply to the scammer to ask who they are

☐ Write down what data was shared ☐ Note the time and the sender

☐ Note where it appeared

5 **If personal data has leaked, the school may have a legal duty to tell the regulator, often within 72 hours.**

◯ True ◯ False

✎ **Which AI incident is most likely at your school this year? Who would you tell first, and what would you do in the first hour?**

Check your answers

When AI goes wrong

AI security · Level 4 · Lesson 4

1 **The pupil in the picture**

Of the people involved, the pupil in the picture comes first: stop the spread at once while a colleague supports her straight away, keep evidence without sharing it, and follow the school's procedure for the pupil who made it.

2 **Top to bottom: 3, 1, 4, 2**

Stop the harm growing first, then look after people, then record and report while the facts are fresh, and finally fix what let it happen.

3 **A class list pasted into a public chatbot — Delete the chat and its history**
A fake voice note asking parents for fees — Warn parents on the school's usual channel
An agent sent a message nobody approved — Pause the agent and switch on approval
A staff password typed into a chatbot — Change the password now

What to do in the first hour depends on the incident: remove the data, warn parents before anyone pays, stop the agent from acting again, or make the exposed password useless.

4 **Note the time and the sender; Note where it appeared; Write down what data was shared**

Evidence is a record of what happened, kept without spreading it.

5 **True**

Many data protection laws, such as Nigeria's, Kenya's and Egypt's, expect serious breaches to be reported within 72 hours.
