When AI goes wrong

AI security · Level 4 · Lesson 4

Today we will

- Recognise the kinds of AI incident at school.
- Respond in order: contain, protect, keep evidence and report, learn.
- Run a short drill with staff, and teach pupils what to do.

Remember

- Contain first; people before paperwork.
- Keep evidence without spreading it; tell the data lead fast (often 72 hours to the regulator).
- Fix the cause, and thank whoever reported it.

A 20-minute incident drill

1. Set-up (2 min): One incident story per table.
2. Contain and protect (6 min): What do we do in the first hour?
3. Evidence and report (5 min): What do we record, and who hears?
4. Learn (4 min): What let it happen, and what changes?
5. Agree (3 min): One card of steps for the staffroom.

Use made-up names in the stories. Keep the tone calm and blame-free: the drill is practice, not a test of anyone. If your school already runs a cyber drill, add this story to it.

Let’s discuss

1. Why does containment come before writing the report?
2. How do we warn parents without spreading the fake?
3. What would make staff report a mistake straight away?

Exit ticket

- Write the first three things you would do if a pupil's data leaked through an AI tool, and who you would tell.
