Review plan · for the teacher

# AI security policy and red teaming at school: unit check

AI security · Level 4 · Unit check

| Time | Materials |
| --- | --- |
| 45 min | Board, chalk, paper. No devices needed. |

## Learning goals

- Map your school's AI risks
- Red-team a school chatbot
- A policy that holds
- When AI goes wrong

## Activity: Team quiz, then a plan

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Finish by putting dates on the school's next AI security steps

## Discussion

- Which part of this unit does our school need first?
- Which of our rules could become an enforced check?
- Who will own our AI risk map, and when will we review it?

## Exit ticket

- One step I will lead, with whom, and by when

**Try it at school tomorrow**
Pick the piece of this unit your school needs most (the risk map, a red-team session, the one-page policy or the incident drill), put a date on it with one colleague, and tell your head teacher.

Quiz sheet · for each team

# AI security policy and red teaming at school: unit check

AI security · Level 4 · Unit check

Team _____ Date _____

**1** **In a school's AI risk map, how is each risk scored?**

- ◯ Impact alone, from 1 to 3
- ◯ The tool's price × its number of users
- ◯ Likelihood × impact, each from 1 to 3

**2** **Which tools deserve the hardest look in a threat model? Choose all that apply.**

- ☐ A chatbot that only reads lesson notes
- ☐ A homework agent that can delete files
- ☐ An agent that books rooms and emails staff
- ☐ The parents' bot that can send messages

**3** **A risk that everyone agrees "somebody" should check has an owner.**

- ◯ True
- ◯ False

**4** **Put the red-team test in order.**

- ☐ Score it and rate severity
- ☐ Report to the owner, then re-test
- ☐ A test bank, two wordings each
- ☐ Written permission and an agreed scope
- ☐ Run it with made-up data

**5** **Match each red-team finding to its severity.**

| | | |
|---|---|---|
| The bot told a rude joke | • • • • | 3: danger to a person |
| The bot helped with exam answers | • • • • | 1: embarrassing |
| The bot gave a child's address to a stranger | • • • • | 2: harmful |

**6** **Your AI club finds a wording that makes the homework bot write messages "from the head teacher". What next?**

- ◯ Report it to the tool's owner, agree a date for the fix, and re-test
- ◯ Share the exact wording with all staff so they can spot fake messages
- ◯ Post the wording online to warn everyone

**7** **A poster saying "Always check before the bot sends" is an enforced check.**

- ◯ True
- ◯ False

**8** **This check is part of a school's policy in code. What does it print?**

```
def may_send(asked, yes):
    return asked and yes

print(may_send(True, False))
```

◯ True ◯ An error ◯ False

**9** **A class list was pasted into a public chatbot. Which are containment steps? Choose all that apply.**

☐ Switch training off in the account ☐ Delete the chat and its history

☐ Forward the chat to all staff ☐ Write the lessons-learned note

☐ Change any password that was in it

**10** **Nigeria's, Kenya's and Egypt's laws expect a serious data breach to reach the regulator within…**

◯ 72 hours ◯ There is no rule ◯ 30 days

**11** **Complete the order of an incident response.**

Contain it, _____ people, keep evidence and _____, then learn.

**Word bank:** report · forward · protect · blame

Answers · for the teacher

# AI security policy and red teaming at school: unit check

AI security · Level 4 · Unit check

**1** **Likelihood × impact, each from 1 to 3**

Likelihood × impact ranks risks so the worst get attention first: a 9 needs action now, a 6 an owner and a plan, a 3 or 4 a fresh check at each review, a 1 or 2 can be watched.

**2** **The parents' bot that can send messages; An agent that books rooms and emails staff; A homework agent that can delete files**

Tools that act (send, book, delete) turn a mistake or a hidden order into something done in the world.

**3** **False**

A shared job is nobody's job. A risk is owned only when one named person has it, with a date to check it.

**4** **Top to bottom: 4, 5, 2, 1, 3**

Permission and scope come before any test, and the work ends only when the fix has been tested again.

**5** **The bot told a rude joke — 1: embarrassing**
**The bot helped with exam answers — 2: harmful**
**The bot gave a child's address to a stranger — 3: danger to a person**

Severity says how bad a miss is. Danger to a person or their data is always the top, and is fixed before anything else.

**6** **Report it to the tool's owner, agree a date for the fix, and re-test**

Responsible disclosure: the owner hears first and gets time to fix it.

**7** **False**

A poster relies on people remembering. An enforced check is built into the system: the bot cannot send until a teacher taps Approve.

**8** **False**

and needs both to be true. The user asked (True) but nobody said yes (False), so nothing is sent.

**9** **Delete the chat and its history; Switch training off in the account; Change any password that was in it**

Containment stops the harm growing: remove the data, stop it being used, make exposed passwords useless.

**10** **72 hours**

72 hours from when the school becomes aware.

**11** **Contain it, protect people, keep evidence and report, then learn.**

Stop the harm growing, look after the people affected, record and report while the facts are fresh, then fix what let it happen.
