Lesson notes · for you

Deepfakes and AI-made content

AI security · Lower secondary · Lesson 1

Time
20 min

Materials
A phone with internet, or a family phone with its owner's permission (optional); Paper and a pen; A small card for your four checks

Learning goals

- Explain how AI fakes faces, voices and pictures.
- Check a suspicious post like a fact-checker.
- Know that detectors are clues, and never share fakes of real people.

Activity: Fact-checker's desk

1. Warm-up (3 min): Think of a picture, clip or voice note you saw and weren't sure about. What made you doubt it, or believe it?
2. Learn (5 min): Write the four checks on a small card: the account (new? copying a name?), the original (where did it appear first?), a trusted report (news site or official page), who gains (a link, a sale, someone's embarrassment).
3. Check (8 min): With a partner, use the card on three posts: from a phone with permission, or from printed examples. Write each verdict: real, fake or not sure.
4. Share (4 min): Tell another pair your verdicts and which check helped most. Agree: “not sure” means don't share.

No phone? Ask your teacher for printed examples, or describe posts you've seen. Never forward a fake, not even to show it.

Discussion

- Why can't you rely on spotting glitches?
- Which of the four checks is quickest on a phone?
- Why is “Is this true?” in a group still a way of spreading a fake?

Check yourself

- Write your four checks from memory, and one thing you'll do if a fake ever targets you.

Try it this week
Pick one picture or clip that is going round your family or class group. Check the account that posted it, search for the original, and look for a trusted report. Then tell the group what you found, kindly, without forwarding it.

Worksheet

Deepfakes and AI-made content

AI security · Lower secondary · Lesson 1

Name _____ Class _____ Date _____

1 **Someone posts a fake picture of you in a group chat. What's the best first step?**

- ◯ Post an angry reply in the group
- ◯ Pay them to take it down
- ◯ Save evidence, report it, and tell an adult you trust

2 **Match each fake to how it is made.**

A singer's face on someone else's body	• • • •	Lip-syncing
A politician's mouth saying new words	• • • •	Face swapping
A voice note in your aunt's voice	• • • •	An image generator
A photo of a flood that never happened	• • • •	Voice cloning

3 **If a video has no glitches (the hands, teeth and blinking all look right), it must be real.**

- ◯ True
- ◯ False

4 **Put in order: checking a viral clip before you share it.**

- ☐ Look for a trusted report
- ☐ Pause: don't share yet
- ☐ Then decide: share, or not
- ☐ Search for the original
- ☐ Check the account that posted it

5 **A detector says a classmate's essay is "probably AI". Which are true? Choose all that apply.**

- ☐ It proves your classmate cheated
- ☐ A few edits can hide AI text from it
- ☐ It's a clue to look into, fairly
- ☐ It could be a false alarm

✎ **Think of a picture, clip or voice note you saw recently that might have been fake. What would you check first, and why?**

Check your answers

Deepfakes and AI-made content

AI security · Lower secondary · Lesson 1

1 **Save evidence, report it, and tell an adult you trust**

Keep a screenshot with the date, report the picture in the app, and tell an adult you trust.

2 **A singer's face on someone else's body — Face swapping**
A politician's mouth saying new words — Lip-syncing
A voice note in your aunt's voice — Voice cloning
A photo of a flood that never happened — An image generator

Each kind of fake has its own tool: swapping faces, moving lips, copying a voice, or making a whole new picture.

3 **False**

Each new tool fixes old mistakes, so a fake can look perfect.

4 **Top to bottom: 4, 1, 5, 3, 2**

Pausing comes first, because sharing is what spreads a fake.

5 **It could be a false alarm; A few edits can hide AI text from it; It's a clue to look into, fairly**

A detector gives a chance, not a proof: honest writing gets flagged sometimes, and edits wipe the signal.
