Data poisoning and backdoors

AI security · University · Lecture 2

In this lecture

- Classify poisoning attacks.
- Explain backdoors.
- Defend the data supply chain.

Remember

- Data is an attack surface.
- Clean accuracy hides backdoors.
- Track provenance.

Map the supply chain

1. Warm-up (5 min): Who changed the model?
2. Map (15 min): Sources.
3. Attack (15 min): Entry points.
4. Control (20 min): Defences.
5. Wrap-up (5 min): One-minute paper.

Let’s discuss

1. Which entry point was easiest?
2. Would clean accuracy reveal it?
3. Which control covers most?

Exit ticket

- Name one dataset you use whose provenance you cannot verify.
