One phone, many pupils

Programming · Level 4 · Lesson 2

Today we will

- Run pair programming and group roles, with swaps.
- Live-code from the front, with pupils predicting.
- Prepare phones to work offline.

Remember

- Driver and navigator swap every 5 to 10 minutes.
- Pause before each run: “What will it print?”
- Download, open a code step, charge, test offline.

Drivers and navigators

1. Live code (10 min): Write a program at the front; pupils predict.
2. Roles (5 min): Explain the four roles and the rota.
3. Debug (15 min): Groups fix a buggy program, swapping each bug.
4. Report (5 min): Reporters explain one bug each.
5. Wrap-up (5 min): Who drove today? Exit ticket.

Prepare the phones the day before: lessons downloaded, a code step opened once, batteries charged.

Let’s discuss

1. How did the roles change who took part?
2. What did pupils learn from your deliberate mistake?
3. What will you prepare the day before every computing lesson?

Exit ticket

- Write your rota for the next lesson: groups, roles and swaps.
