Back it up

Cyber security · Level 2 · Lesson 2

Today we will

- Explain what a backup is and why we need more than one copy.
- Use the 3-2-1 rule to plan where copies live.
- Explain why one copy should stay unplugged.

The 3-2-1 rule

- 3 copies of what matters
- 2 kinds of storage
- 1 copy away from school
- 1 copy unplugged, tested every term

Where does the register live?: Three copies

1. Warm-up (5 min): A phone falls in a bucket. What is lost?
2. Teach (8 min): The 3-2-1 rule, drawn on the board.
3. Three copies (15 min): Groups draw where the register’s copies live.
4. Share (7 min): Which copy survives a flood, and which survives ransomware?
5. Wrap-up (5 min): Exit ticket.

Before the lesson, draw a phone, a cloud, a school and a house on one side of the board. Prepare paper and pencils for each group. If you have a USB drive, bring it to show.

Let’s discuss

1. What would you lose if your phone disappeared today?
2. Why isn’t a synced copy enough?
3. Where could the school keep a copy away from the building?

Exit ticket

- One thing I would back up + where its copies would live.
