Lesson plan · for the teacher

Apps, permissions and AI tools in class

Cyber security · Level 3 · Lesson 2

Time	Materials
40 min	Board and chalk; Four app pictures, drawn on the board or on cards; Your phone's permissions screen to show (optional)

Learning goals

- Check an app or AI tool before using it with a class.
- Set app permissions to only what the app needs.
- Use AI tools without giving away pupils' data.

Activity: Permission detectives

1. Warm-up (5 min): Tell the story of the free quiz app that asks for location, contacts and the microphone. Ask: why would a quiz want those?
2. Teach (8 min): Explain that a permission is an app asking to use part of the phone. Write the five permissions on the board: location, camera, microphone, contacts, photos.
3. Detectives (15 min): In groups, pupils decide which permissions the torch, the map, the quiz and the camera really need, and write one reason for each. Walk around and ask about any "yes".
4. Share (7 min): Groups compare answers and vote on the hard cases, such as whether a map needs location all the time or only while it is used, or why a torch may ask for the camera (only for its flash).
5. Wrap-up (5 min): Exit ticket: each pupil names one app and the only permission it really needs. Add the rule to the board: allow only what the job needs.

Before the lesson, draw four simple app pictures on the board: a torch, a map, a quiz and a camera. Next to them, list five permissions: location, camera, microphone, contacts, photos.

Discussion

- Why would a free app want your contacts?
- Which permission would you never give a game?
- What should never go into an AI chatbot?

Exit ticket

- One app + the only permission it really needs.

Try it at school tomorrow

Draw four apps on the board: a torch, a map, a quiz and a camera. Pupils decide which permissions each one really needs (location, camera, microphone, contacts, photos), vote, and explain why. Finish with one rule: allow only what the app's job needs.

Practice questions · for you

Apps, permissions and AI tools in class

Cyber security · Level 3 · Lesson 2

1 **A teacher asks an AI tool to help write a report on a pupil, and pastes in the pupil's full name and medical notes. Is that safe?**

◯ Yes — the AI keeps it private ◯ No — leave out the name and health details, and write "Pupil A"

◯ Yes, as long as she deletes the chat afterwards

2 **Before you use a new reading app with Grade 6, which of these should you check?**

☐ Who makes it, and how it makes money ☐ What data it collects

☐ What you can switch off in its settings ☐ How many people have downloaded it

☐ Its minimum age

3 **Match each app to the permission it really needs.**

A map	• • • •	Camera and microphone
A video-call app	• • • •	Only the photos you choose
A quiz app	• • • •	Location, only while you use it
A photo editor	• • • •	None of these

4 **If you use a private window on a cyber café computer, you don't need to sign out.**

◯ True ◯ False

5 **You need to print a form at a cyber café. Put the steps in order.**

☐ Print the form, then delete the downloaded file

☐ Open a private window

☐ Sign out of your account

☐ Close the window

☐ Sign in without ticking "remember me"

✎ **Which app or AI tool do you use most with pupils? Which of the four questions can you not answer about it yet?**

Check your answers

Apps, permissions and AI tools in class

Cyber security · Level 3 · Lesson 2

1 **No — leave out the name and health details, and write "Pupil A"**

Health details are sensitive, and what you paste leaves your hands: it may be stored and, depending on the settings, used for training.

2 **Who makes it, and how it makes money; What data it collects; Its minimum age; What you can switch off in its settings**

Those four tell you what the app does with pupils' data and whether pupils may use it at all.

3 **A map — Location, only while you use it**
A video-call app — Camera and microphone
A quiz app — None of these
A photo editor — Only the photos you choose

Each permission should match the app's job.

4 **False**

A private window forgets your sign-ins only when it is closed.

5 **Top to bottom: 3, 1, 4, 5, 2**

Private first, so no history or sign-ins are kept; no "remember me", so the next person can't get in; delete the download, because a private window keeps files; and sign out before you close, because the window only forgets once it is closed.
