Review plan · for the teacher

Privacy and school data: unit check

Cyber security · Level 3 · Unit check

Time	Materials
35 min	Board, chalk, paper. No devices needed.

Learning goals

- Pupils' data: collect less, protect more
- Apps, permissions and AI tools in class
- Social media, pupils' photos and you
- When data goes wrong: handling an incident

Activity: Safe, risky or an incident?

1. Warm-up (3 min): Ask for one word that sums up each of the four lessons, and write them on the board.
2. Sort (12 min): Teams get twelve situation cards and sort them into three piles: safe, risky, incident. For example: results sent one to one; a quiz app asking for contacts; marks sent to the wrong group.
3. Explain (8 min): Each team defends two of its choices. The class agrees or challenges, giving a reason.
4. Fix (7 min): Each team takes its riskiest card and rewrites it so it becomes safe.
5. Wrap-up (5 min): Exit ticket: each person writes one habit from this unit they will use this week.

Write twelve short situation cards before the session, a mix of safe, risky and incident, from all four lessons. One set per team.

Discussion

- Which habit will you change first?
- What would you tell a new colleague?
- Which situation was hardest to judge?

Exit ticket

- One habit from this unit I will use this week.

Try it at school tomorrow

Pick the habit from this unit your school needs most, from collecting less to reporting early. Share it with colleagues this week, and agree one change together.

Quiz sheet · for each team

Privacy and school data: unit check

Cyber security · Level 3 · Unit check

Team _____ Date _____

1 **Which of these is sensitive personal data that needs the most care?**

◯ A pupil's class ◯ The school's address ◯ A pupil's medical condition ◯ The term dates

2 **Which habits protect pupils' data?**

☐ Posting the full results list so parents can compare ☐ Keeping old registers for ever, "just in case"
☐ Using initials or numbers when names aren't needed ☐ Locking phones and cupboards
☐ Sharing files with named people only

3 **A free app that is popular with pupils is safe to use with a class without checking its data and age rules.**

◯ True ◯ False

4 **Match each app to the permission it really needs.**

A calculator	• • • •	The microphone
A map	• • • •	None of these
A voice recorder	• • • •	The camera
A class camera app	• • • •	Location, while you use it

5 **You want an AI chatbot to help you write a report on a pupil's behaviour. What is safe to paste in?**

◯ "Pupil A" and the behaviour in general terms, with nothing that identifies the child
◯ The pupil's full name and your notes ◯ A photo of the pupil's file

6 **Complete the rule for pupils' photos.**

Before posting, get _____, post _____ photos, and never add _____.

Word bank: full names · hashtags · group · consent · close-up

7 **Turning off your camera's location tags stops new photos from storing, inside the file, where they were taken.**

◯ True ◯ False

8 **A data incident has happened. Put the five steps in order.**

☐ Notify the people affected
☐ Learn, so it doesn't happen again
☐ Contain: stop the damage spreading
☐ Assess what data it was, and whose
☐ Report it the same day

9 **Who decides whether a serious data breach must be reported to the regulator?**

◯ Nobody, if it was an accident ◯ The head teacher or data lead, once you've told them
◯ The teacher who made the mistake, alone

10 **Which of these never help after a data incident?**

☐ Deleting the evidence ☐ Asking people to delete copies they received
☐ Telling the head teacher the same day ☐ Paying someone who demands money ☐ Hiding it

Answers · for the teacher

Privacy and school data: unit check

Cyber security · Level 3 · Unit check

1 **A pupil's medical condition**

Health data can cause real harm if it leaks, so it needs the most care.

2 **Sharing files with named people only; Using initials or numbers when names aren't needed; Locking phones and cupboards**

Sharing with named people, using fewer names and locking things up all cut the ways data leaks.

3 **False**

Popular isn't the same as careful. A free app may pay for itself with data, and many set a minimum age, often 13.

4 **A calculator — None of these**
A map — Location, while you use it
A voice recorder — The microphone
A class camera app — The camera

Each permission should match the app's job.

5 **"Pupil A" and the behaviour in general terms, with nothing that identifies the child**

Whatever you paste may be stored and, depending on the settings, used for training.

6 **Before posting, get consent, post group photos, and never add full names.**

Consent, group photos and no full names: the three habits that let you share the joy of the day without the details of a child.

7 **True**

True: with location tags off, the photo file no longer records the place.

8 **Top to bottom: 4, 5, 1, 3, 2**

Contain first, because damage grows by the minute; report the same day; assess before notifying, so people hear what actually happened; and learn when things are calm.

9 **The head teacher or data lead, once you've told them**

Your job is to tell the school the same day.

10 **Hiding it; Deleting the evidence; Paying someone who demands money**

Hiding lets the damage grow, deleting the evidence leaves the school and the police with nothing to go on, and paying invites more demands.
