Review notes · for you

Safe online: unit check

Cyber security · Level 1 · Unit check

Time	Materials
15 min	Paper and a pen. No device needed.

Learning goals

- Passwords nobody can guess
- Spot the scam
- Codes are keys
- When something goes wrong

Activity: Teach it back

1. Pick (2 min): Choose the lesson from this unit you found most useful.
2. Prepare (5 min): Write its three key points on a small card, with one example from your own life.
3. Teach (5 min): Teach it to a partner or someone at home in under three minutes, then ask them one question to check.
4. Swap (3 min): Listen to your partner's lesson and ask one question about it.

Examples only: never write real passwords, codes or account details on the card.

Discussion

- Which habit have you already started?
- Which one is hardest for you, and why?
- Who at home could use what you learned?

Check yourself

- The one habit I will keep from this unit.

Try it this week

Pick the habit from this unit you need most — a passphrase, two-step sign-in or your family plan — and do it this week. Then teach it to one person at home.

Quiz sheet

Safe online: unit check

Cyber security · Level 1 · Unit check

Name _____ Class _____ Date _____

1 **Which password would take a guessing program longest to crack?**

◯ river-candle-goat-window ◯ football123 ◯ P@55word ◯ Musa2010

2 **It's fine to use one strong password for all your accounts, as long as it's long.**

◯ True ◯ False

3 **Which of these are warning signs of a scam? Choose all that apply.**

☐ A reminder you expected, from your school's saved number ☐ A request for your PIN

☐ A link you didn't expect, from an unknown number ☐ A message written in your own language

☐ "Only today — pay now to keep your prize"

4 **Match each situation to the safest action.**

A game friend asks for the code just sent to you	• • • •	Use your backup codes from home
A sign-in prompt you didn't start	• • • •	Never send it
You lost your phone and need to sign in	• • • •	Sign out, and don't save the password
You used a cyber café computer	• • • •	Tap no, then change the password

5 **Your friend's account messages you: "Please send me money by mobile money now, it's urgent." What's the best first step?**

◯ Reply: "Is this really you?" ◯ Call your friend on their usual number ◯ Send it — it's their account

6 **You were tricked into paying a fake shop by mobile money. Put the steps in order.**

☐ Call the mobile money company on its official number

☐ Tell a parent or guardian straight away

☐ Report and block the shop's account

☐ Keep screenshots of the chat and the payment

7 **Complete the sentence.**

A one-time _____ is for you alone, and a passphrase is made of random _____.

Word bank: friend · numbers · code · words

8 **Why does your email password matter most?**

◯ Because it's usually your oldest account ◯ Because emails are private

◯ Because the reset links for your other accounts go there

9 **On a cyber café computer, ticking "remember me" is safe if you close the browser afterwards.**

◯ True ◯ False

10 **What makes a passkey hard to steal?**

◯ It's a very long password that you keep secret ◯ It's a new code sent to you by text each time you sign in

◯ You unlock it with your fingerprint or face, and it only works on the real website

Check your answers

Cyber security · Level 1 · Unit check

1. **river-candle-goat-window**

   Four random words are long and have nothing to do with you.

2. **False**

   However strong it is, if one website leaks it, criminals try it on all your other accounts.

3. **"Only today — pay now to keep your prize"; A request for your PIN; A link you didn't expect, from an unknown number**

   A hurry with a payment, a request for your PIN and an unexpected link from an unknown number are all warning signs.

4. **A game friend asks for the code just sent to you — Never send it**
   A sign-in prompt you didn't start — Tap no, then change the password
   You lost your phone and need to sign in — Use your backup codes from home
   You used a cyber café computer — Sign out, and don't save the password

   Codes and prompts are your second lock, backup codes are your spare key, and shared computers remember what you leave behind.

5. **Call your friend on their usual number**

   Accounts get taken over, so a message from a friend's account doesn't prove it's your friend.

6. **Top to bottom: 2, 1, 4, 3**

   Speed matters most: an adult and the company together have the best chance of stopping the money.

7. **A one-time code is for you alone, and a passphrase is made of random words.**

   A code sent to your phone unlocks your account, so it never leaves you.

8. **Because the reset links for your other accounts go there**

   Whoever controls your email can press "Forgot password" on your other accounts and take them too.

9. **False**

   "Remember me" keeps you signed in or saves your password on that computer, even after the browser closes, so the next person can open your account.

10. **You unlock it with your fingerprint or face, and it only works on the real website**

    A passkey isn't something you type or receive, so there's nothing to guess, read out or hand over, and a fake website can't use it.
